CANADIAN AIRPORT CHARTS

CARTES DES AÉROPORTS CANADIENS

The information in the Canadian Airport Charts provides pictorial displays of Canadian airport manoeuvring areas found in the Canada Air Pilot or the military GPH 200, and may be reproduced for the sole purpose of assisting pilots during aircraft ground movement operations. Up-to-date information on flight planning procedures and airport services, including fuel, lighting, and local prohibitions or procedures is found in the Canada Flight Supplement.

L'information qui se trouve dans les Cartes des aéroports canadiens contient des indicateurs topographiques des aires de manœuvre des aéroports canadiens provenant du Canada Air Pilot ou du GPH 200 militaire et peut être reproduite à seule fin d'aider les pilotes durant les mouvements d'aéronefs au sol. De l'information à jour sur les procédures de préparation de plans de vol et les services d'aéroport, y compris le carburant, le balisage, ainsi que les interdictions et les procédures locales, se trouve dans le Supplément de vol Canada.

Preface

NAV CANADA, as the office responsible for the publication and distribution of aeronautical information, has decided to make aerodrome diagrams readily available to general aviation pilots through its website. This move will contribute to enhance aviation safety and will help to mitigate some of the risks associated with runway incursions.

Hot Spot: A location on an aerodrome movement area with a high risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

Hot Spots are found on applicable Canadian Aerodrome Charts.

Préface

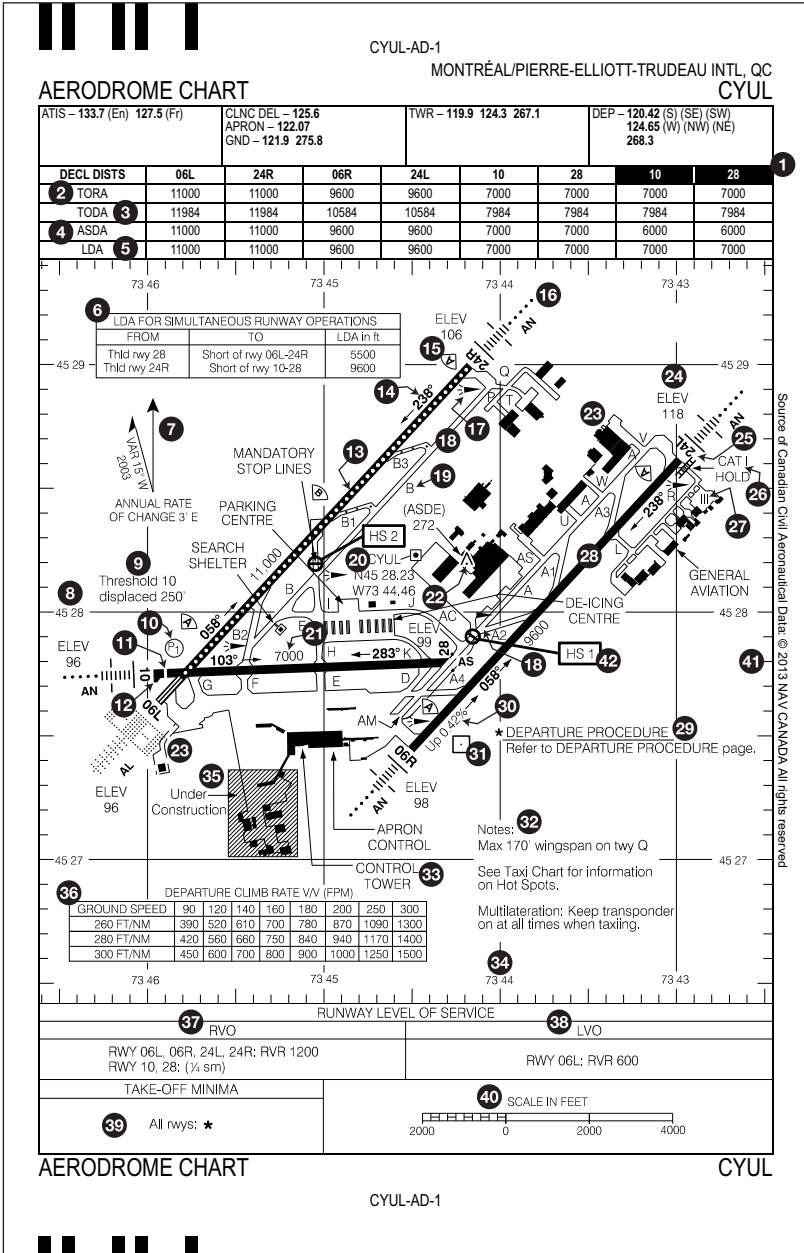

NAV CANADA, en tant que responsable de la publication et de la distribution de l'information aéronautique, a décidé de mettre les schémas d'aérodrome à la disponibilité des pilotes d'aviation générale par l'intermédiaire de son site Web. Cette décision contribuera à accroître la sécurité aérienne et aidera à atténuer certains des risques associés aux incursions sur piste.

Point chaud : Endroit sur l'aire de mouvement d'un aérodrome où il y a un risque accru de collision ou d'incursion sur piste et où une attention soutenue de la part du pilote/conducteur est requise.

Les points chauds se trouvent sur les cartes d'aérodrome canadiennes applicables.

* If only one value for runway slope is provided, it can be assumed that the runway has a constant slope for the length indicated and the slope direction is reversed in the opposing runway direction. If no length is indicated, this means the provided slope applies for the entire runway length. For example, for a published slope of RWY 04 DOWN 0.36%, it can be assumed that the slope for RWY 22 is UP 0.36% and that this applies for the entire runway length.

AERODROME CHART (AI)

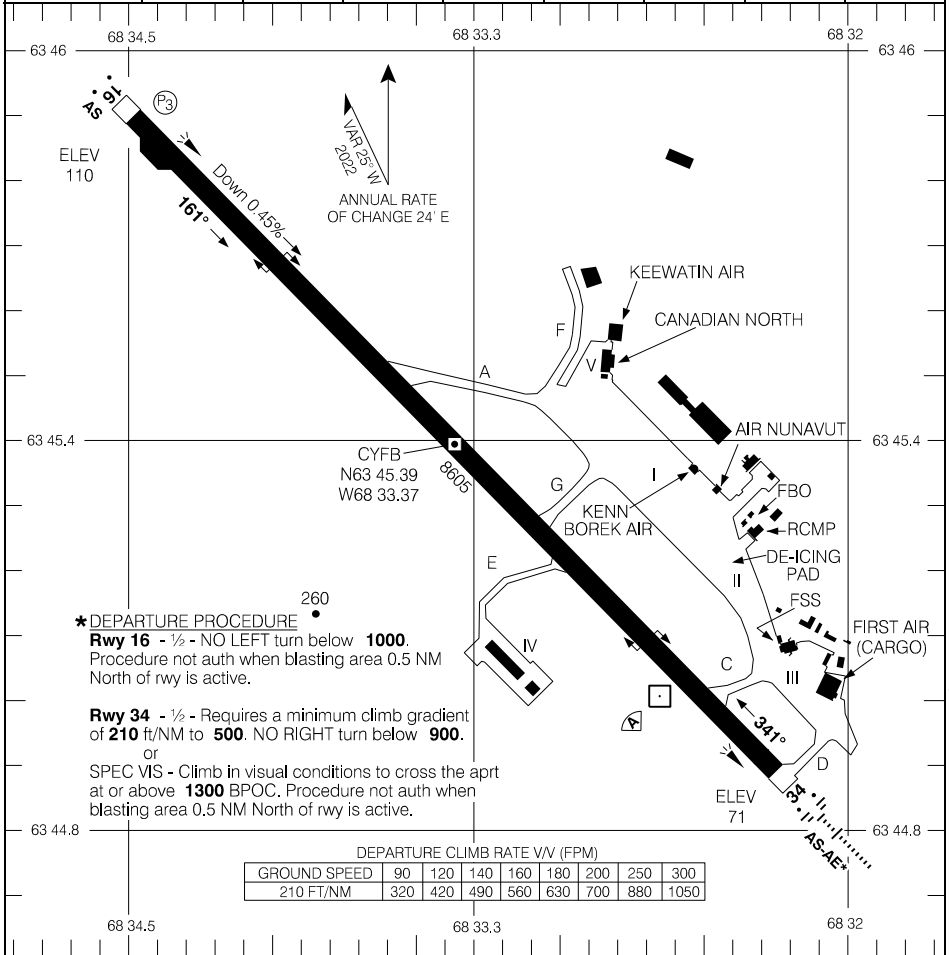

ADDITIONAL INFORMATION

- Pre-taxi clearance is available for up to 1 hr prior to departure. Pilots will receive clearance validation or an amended clearance when ready to taxi. Pilots must ensure that they have received clearance validation prior to take off.
- Expect ALL IFR departures to be assigned a SID that corresponds to the requested departure runway. Pilots are to be familiar with both the ALREX and ITRUS SIDs in case of a short notice change in the operational runway.
- Transient operators should familiarize themselves with receiving aerodrome advisory services as opposed to an aerodrome control service. Aerodrome advisory services (AAS) are primarily intended for the arrival and departure phases of a flight to an aerodrome within a Mandatory Frequency (MF) area, and for transit through an MF area, served by a Flight service station (FSS). AAS is provided on the MF. Mandatory reports by aircraft on the MF are critical for the FSS to be able to provide effective air traffic information. Additional details regarding AAS and MF are available within the TC AIM.

Note 1: When A380 is on the taxiway btwn Gate 66 & Twy P, Twy M btwn Twy J and Twy T is avbl to acft with wingspan 41.1m/134.8' (B757) & smaller only.

Rwy 08L Arrivals

Use of reverse thrust is to be avoided or reduced when conditions permit. M1, M3, M5 (rapid exit): Design speed in wet conditions is 50 kt (93 km/h).

Rwy 08R Arrivals

Acft exiting onto D1, turn north on E, do not stop in Rwy area (See HOT SPOT 4). D1, D3 (rapid exit): Design speed in wet conditions is 50 kt (93 km/h).

Rwy 13 Departures

Not avbl for acft with wingspan greater than 65.0m/213.3' (A380/B747-8/AN124). Not auth for A340-600, A350-900/-1000, B777-300/-300ER, B787-10.

Rwy 26R Arrivals

Use of reverse thrust is to be avoided or reduced when conditions permit. M2, M4, M6 (rapid exit): Design speed in wet conditions is 50 kt (93 km/h).

Rwy 26L Arrivals

Turns onto Rwy 31 NOT AUTHORIZED without clearance. Acft exiting onto Rwy 13/31: RIGHT turns onto D avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only. Acft exiting onto H, hold short of D, do not stop in Rwy area (See HOT SPOT 4).

Rwy 31 Arrivals

Not avbl for acft with wingspan greater than 65.0m/213.3' (A380/B747-8/AN124). Not auth for A340-600, A350-900/-1000, B777-300/-300ER, B787-10.

TAXI CHART

Notes**Taxiway Limitations**

All Twys: Discretionary oversteer is required at every intersection for all acft types.

A Compass Rose: Not avbl SS-SR.

A2: Avbl to acft with MTOW 50,000lbs (DHC-8 300/Lear 60) & less.

C (south of F): Avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only. Follow me required below RVR 1200, ctc Aprt Ops.

D: CAUTION: Acft cannot safely taxi via Twy D east or west past acft at the Twy D5 or Twy D7 runway holding positions.

D2: Avbl to acft with MTOW 100,000lbs (CRJ-900) & less.

DW: Avbl to acft with wingspan 41.1m/134.8' (B757) & smaller only.

E: Entry & exit at Apron VI avbl to acft with wingspan 60.4m/198.2' (A330-300/B787-9) & smaller only.

F (east of C): Avbl to acft with wingspan 24.9m/81.7' (CRJ-900) & smaller only. Follow me required below RVR 1200, ctc Aprt Ops.

J (southbound): A340, B747 not auth south of Twy K due jet blast (avbl for acft under tow).

L: Entry & exit at Apron VI avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

Q: Follow me required below RVR 1200, ctc Aprt Ops.

Turn Restrictions

D (eastbound): LEFT turns onto H avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

D (westbound): No LEFT turns onto H. No LEFT turns onto D7.

D7: No RIGHT turns onto D.

H (southbound): No RIGHT turns onto A, L, or H4. RIGHT turns onto D avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only. No LEFT turns onto D1.

H (northbound): No LEFT turns onto V. No RIGHT turns onto D. RIGHT turns onto L avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

J (southbound): All acft use min thrust when turning due jet blast.

J (northbound): LEFT turns onto K avbl to acft with wingspan 41.1m/134.8' (B757) & smaller only, due jet blast (avbl for acft under tow).

L: No RIGHT turns onto V.

L4 (northbound): Only acft with a max wingspan of 52.0m/170.6' (e.g. A310/B767) can hold short of L while exiting/crossing Rwy 08R/26L due to acft tail height.

M4: LEFT and RIGHT turns onto M not avbl for A340-600, A350-900/-1000, B777-300/-300ER, B787-10 only, due acft wheelbase.

P: RIGHT turns onto M avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only, due jet blast (avbl for acft under tow).

V: No LEFT turns onto L.

TAXI CHART

Notes**Uncontrolled Taxiways**

C (south of F), F, J (btwn K & L), Q, DR, DS, DT, DU, DV & DW.

Uncontrolled Vehicle Crossings

DS, DT, DU, DV, DY, F, H (north of H4), J, JA, JB, JC, K, N7, P, Q, R, S, T, V.

APU Shutdown Procedure

Acft Auxiliary Power Unit (APU) use shall be limited to 15 min or less in total between on-block time and departure of acft from stands supplied with Ground Power Unit (GPU) and/or preconditioned air, for environmental reasons, if the outside air temperature is between 0 degrees and 20 degrees Celsius.

Acft shall not need to comply with the above limitations on stands not equipped with serviceable GPU and/or preconditioned air or if there are overriding health & safety considerations.

Apron Notes

Apron I, II, III, IV, V, VI, VIII: PPR Airport Ops is required. PPR for all engine airstarts or crossbleed starts. Advise ATC if ground crew not present at gate.

Apron I: Avbl to acft with wingspan 24.9m/81.7' (CRJ-900) & smaller only. Hover taxi not auth, heli must ground taxi or be towed.

Apron II: Avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only. Hover taxi not auth, heli must ground taxi or be towed.

Apron III: Avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only. Jets tow in & out. Hover taxi not auth, heli must ground taxi or be towed.

Apron IV: Avbl to acft with wingspan 41.1m/134.8' (B757) & smaller only. Taxilane east of DW avbl to acft with wingspan 32.1m/105.3' (CV-580) & smaller only. Btwn DW & FedEx not auth for taxi below RVR 1200, follow me required, ctc Aprt Ops.

Apron VI (Horseshoe): Taxilanes avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

Apron VI (South): Taxilane btwn G & parking position S1 avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only.

Apron VI (South): Taxilane east of parking position S1 avbl to acft with wingspan 60.4m/198.2' (A330-300/B787-9) & smaller only.

Apron VI (North): Travelling eastbound, turns onto P avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only, due jet blast (avbl for acft under tow).

Apron VI (North): When A380 is on M between J & T, the taxilane between Gate 66 & T is avbl to acft with wingspan 41.1m/134.8' (B757) & smaller only.

Apron VI (East): Bypass taxilane (amber inset lighting) avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

Apron VI (East): Simultaneous use of dual taxilanes avbl to acft with wingspan 36.0m/118.1' (A321/B737) & smaller only.

Apron VI (East): Pushbacks from parking positions E1-E3 to west taxilane. Pushbacks from parking positions E10-E19 to south taxilane.

Apron VIII: Avbl to acft with wingspan 52.0m/170.6' (A310/B767) & smaller only.

Btwn Purolator & FedEx Aprons: Avbl to acft with wingspan 17.4m/57.1' (Metro III) & smaller only.

TAXI CHART

EFF 11 JUL 24

CYVR

TAXI CHART

Notes**Hot Spots**

HS 1: Twy D9 hold line for Rwy 26L is displaced 131m (430 ft) from rwy edge. Acft cannot safely taxi via Twy D east or west past acft at the Twy D5 or Twy D7 hold lines.

HS 2: Twy L6 hold line for Rwy 08R is displaced 166m (545 ft) from rwy edge.

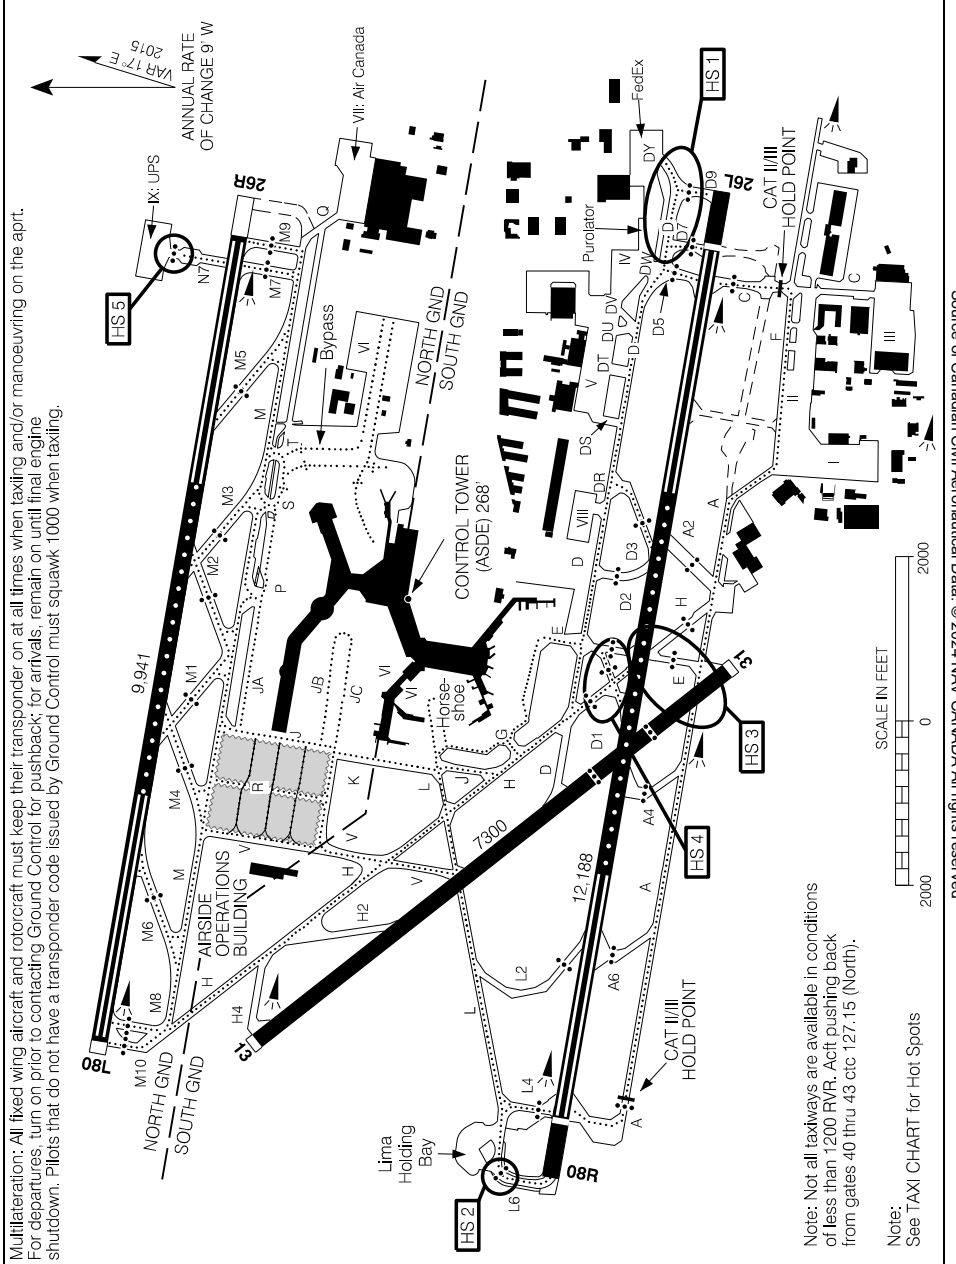

HS 3: Taxiing to Rwy 08R/26L, acft fail to hold short and incur on Rwy 13/31 on Twy A. Taxiing across Rwy 08R/26L, acft fail to hold short and incur on Rwy 13/31 on Twy E.

HS 4: Acft taxiing H, southbound, hold line is located 30m (100 ft) back from the standard rwy hold position. Acft exiting onto D1, turn north on E. Do not stop in rwy area.

HS 5: Twy N7 hold line for Rwy 26R is displaced at intersection of Twy N7 and Apron IX 214m (702 ft) from rwy edge.

TAXI CHART

ATIS - 124.6	CLNC DEL - 121.4	TWR - 118.7 (S) 119.55 (N) 226.5
	GND - 121.7 (S) 127.15 (N) 275.8	

Multilateration: All fixed wing aircraft and rotorcraft must keep their transponder on at all times when taxiing and/or manoeuvring on the aprt. For departures, turn on prior to contacting Ground Control for pushback; for arrivals, remain on until final engine shutdown. Pilots that do not have a transponder code issued by Ground Control must squawk 1000 when taxiing.

Note: Not all taxiways are available in conditions of less than 1200 RVR. Acti pushing back from gates 40 thru 43 etc 127.15 (North).

Note:

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 to 600 ft)**Application**

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast: "Low visibility procedures in effect for <name of applicable runway>".

General**Taxi Routes**

Low Visibility Taxi Routes are equipped with green inset centerline lighting. Some taxiway/taxiway intersections have been identified with three inset yellow centerline lights. Midfield crossings of 08R/26L are not permitted during low visibility operations.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area. In the event of an ASDE failure, ATC may suspend, restrict or terminate low visibility operations.

Departures

The primary runways for departure are 08R/26L. Yellow flashing runway guard lights (wig-wags) and stop bars are installed abeam each hold line. Intersection take-offs are not permitted.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

SMGCS Rwy 08L/26R and 08R/26L

Runway/taxiway intersections are equipped with yellow flashing runway guard lights and stop bars consisting of red inset lights and red elevated lights located at the taxi hold position.

At runway entry points, M10, M8, M7, M9, N7, L4, L6, D, D5, D7, DY, C and A, when the red stop bar lights are illuminated, green lead-on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead-on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

"AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR"

Arrivals

The primary runways for arrival are 08L/26R.

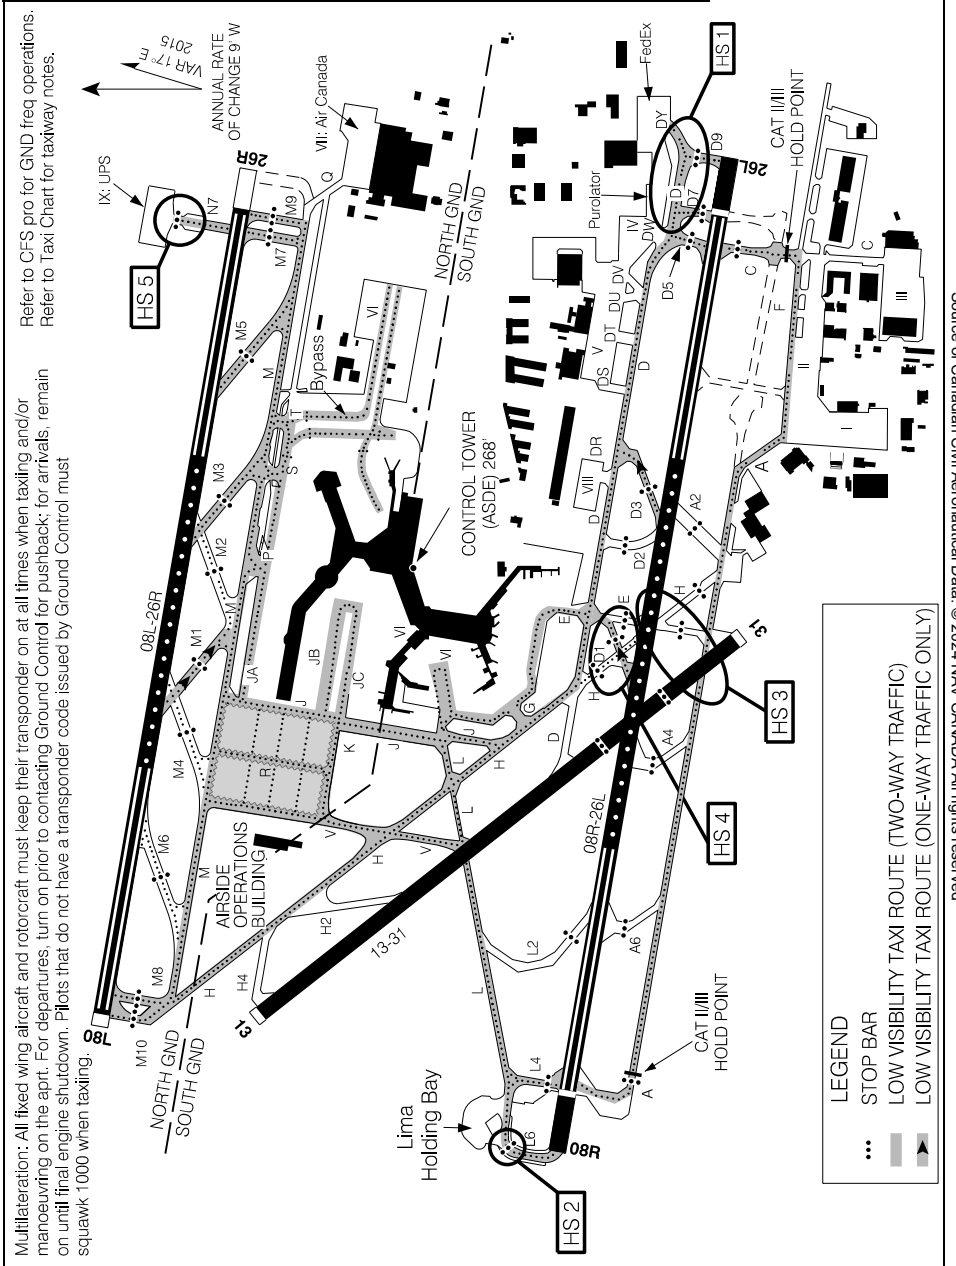

Plan to exit on the centerline lighted rapid exit taxiways and proceed beyond the alternating green and yellow centerline lights to the taxi intersection lights to ensure the aircraft is clear of the runway and the ILS sensitive area.

DE-ICING GENERAL

Overview

West Pads is the Central De-Icing Facility (CDF) and handles de-icing for all aircraft excluding South Terminal aircraft capable of utilizing the Ground Run-Up Enclosure (GRE) which is the South De-Icing Facility.

West Pads (CDF)

1. Thirty (30) min prior to pushback or taxi, advise "VANCOUVER DE-ICE" on 129.95 and advise, "ACFT DE-ICING REQUIRED".
2. When requesting pushback or taxi clearance, ctc Ground Control on assigned frequency and advise, "ACFT DE-ICING REQUIRED". Ground Control will issue taxi instructions to the West Pads (CDF).
3. Aircraft queuing into CDF is on W12 via Twy V or on Twy R via Twy M/Twy K. When instructed by Ground Control, ctc "PAD CONTROL" 131.975.
4. Follow "PAD CONTROL" instructions to de-icing bay, stop with nose gear positioned on the yellow STOP BAR with brakes set.
5. Once aircraft is in final stop position, brakes are set and aircraft configured for de-icing, ctc "ICEMAN" on 130.700 and advise, "BRAKES SET, ACFT CONFIGURED, READY TO DE-ICE". At this time, pass along any specific fluid and/or treatment requirements.
6. After de-icing is completed and the aircraft has been inspected, "ICEMAN" will provide post-treatment information.
7. When advised by "ICEMAN", ctc "PAD CONTROL" on 131.975 for exit instructions.
8. When advised by "PAD CONTROL", ctc Ground Control on assigned frequency for taxi instructions.

UNDER NO CIRCUMSTANCES MAY THE AIRCRAFT BE MOVED BEFORE PAD CONTROL ADVISES THAT THE AIRCRAFT IS CLEARED TO TAXI OUT OF THE BAY.

West Pads (CDF) De-Icing Bay Capacity:

W1 & W3: Maximum wingspan 36.0m (118.1'), AMBER inset lighting;

W2: Maximum wingspan 65.0m (213.3'), GREEN inset lighting;

W4: Maximum wingspan 36.0m (118.1'), AMBER inset lighting;

W5: Maximum wingspan 65.0m (213.3'), GREEN inset lighting;

W6: Maximum wingspan 24.9m (81.7'), AMBER inset lighting;

W7 & W9: Maximum wingspan 36.0m (118.1'), AMBER inset lighting;

W8: Maximum wingspan 65.0m (213.3'), GREEN inset lighting;

W11 & W13: Maximum wingspan 36.0m (118.1'), AMBER inset lighting;

W12: Maximum wingspan 79.9m (262.1'), GREEN inset lighting;

W15: Maximum wingspan 65.0m (213.3'), GREEN inset lighting;

W17 & W19: Maximum wingspan 36.0m (118.1'), AMBER inset lighting;

W18: Maximum wingspan 79.9m (262.1'), GREEN inset lighting.

DE-ICING GENERAL

Ground Run-up Enclosure (GRE)

Operators must receive an orientation for the GRE facility prior to use.

Crews may contact the "VANCOUVER DE-ICE" or call Aero MAG Operations at (604) 278-1901 to schedule de-icing up to 120 minutes prior to departure. Information required: aircraft type, flight number/call sign, and the type(s) of fluids required. Parking position 2A, on Apron I, is the only staging position for the facility. Aircraft waiting to use the GRE must remain on their aprons until 2A becomes available.

"ICEMAN" will advise if engines should be running during de-icing.

Entry Procedure

1. Before contacting Ground Control for taxi, contact "ICEMAN" 130.925 for position in de-icing queue.
2. When "ICEMAN" approves access to either the staging position (2A) or GRE, contact Ground Control on assigned frequency for taxi.
3. Proceed as instructed by "ICEMAN". CAUTION: DO NOT enter GRE until instructed by "ICEMAN".
4. Advise "ICEMAN" 130.925 when stopped in the GRE.

De-icing Procedure

5. Contact "ICEMAN" 130.925 to confirm brakes set, aircraft configured, engines idle, and provide fluid requirements.
6. After de-icing is complete and the aircraft has been inspected, "ICEMAN" will provide posttreatment information.

Exit Procedure

7. When ready to taxi contact "ICEMAN" 130.925 for instructions.
8. When advised by "ICEMAN", ctc Ground Control on assigned frequency for taxi instructions.

GRE De-icing Capacity:

The largest aircraft that can access the GRE via taxilane on Apron II are:

Propellers (power in/out): Maximum wingspan: 28.9m (94.8') (DH8-Q400 and smaller)

Jets (power in/out): Maximum wingspan: 21.6m (70.9') (Dassault Falcon 900 with winglets and smaller)

Jets (tow in, power out): Maximum wingspan: 28.9m (94.8') (Global Express)

Notes

Widebody Aircraft

Rwy 09 Departures: Twy B, Rwy 03/21, Twy G, Twy E.

Rwy 09 Arrivals: Twy E westbound, Twy S, Twy A.

Rwy 27 Departures: Twy A, Twy S, Twy E eastbound.

Rwy 27 Arrivals: Twy E, Twy G, Rwy 03/21, Twy B.

Taxiways

Taxiway C restricted to 50,000 lbs.

Taxiway M restricted to 12,500 lbs.

Aprons

Apron II restricted to 50,000 lbs.

Apron IV restricted to scheduled commercial traffic only. Acft engine runs abv idle power prohibited, PPR fr OPR for idle power engine runs. Exceptions require prior approval of airport operator.

Rwy 03-21 Operations

Aircraft restricted to max 65,000 lbs for take-off and landing.

No weight restriction for taxiing aircraft rwy 03/21 south of rwy 14/32.

Rwy 27 Arrivals

Aircraft exiting on rwy 14, HOLD SHORT rwy 03, see Hot Spot 3.

Rwy 09 Arrivals

Aircraft exiting on rwy 21, HOLD SHORT rwy 14, see Hot Spot 3.

TAXI CHART

EFF 11 JUL 24

DE-ICING OPERATIONS

DE-ICING PROCEDURES**GENERAL**

1. De-icing at gates is not permitted without authorization from airport operator.
2. North de-icing pad access is controlled by DE-ICE CONTROL. ALL Aircraft must have an approved assignment time prior to pushback or taxi.
3. Assignment times will be provided to de-icing providers only and are provided at 20-minute intervals. De-icing provider contact information and times are detailed in the Services section.
4. ATC does not have oversight of de-icing assignments; all inquiries must be directed to de-icing providers or Snow Desk when open (250-953-7595). If the Snow Desk is not open, all inquiries should be directed to de-icing providers or Airport Operations, Manager, Integrated Operations Centre.

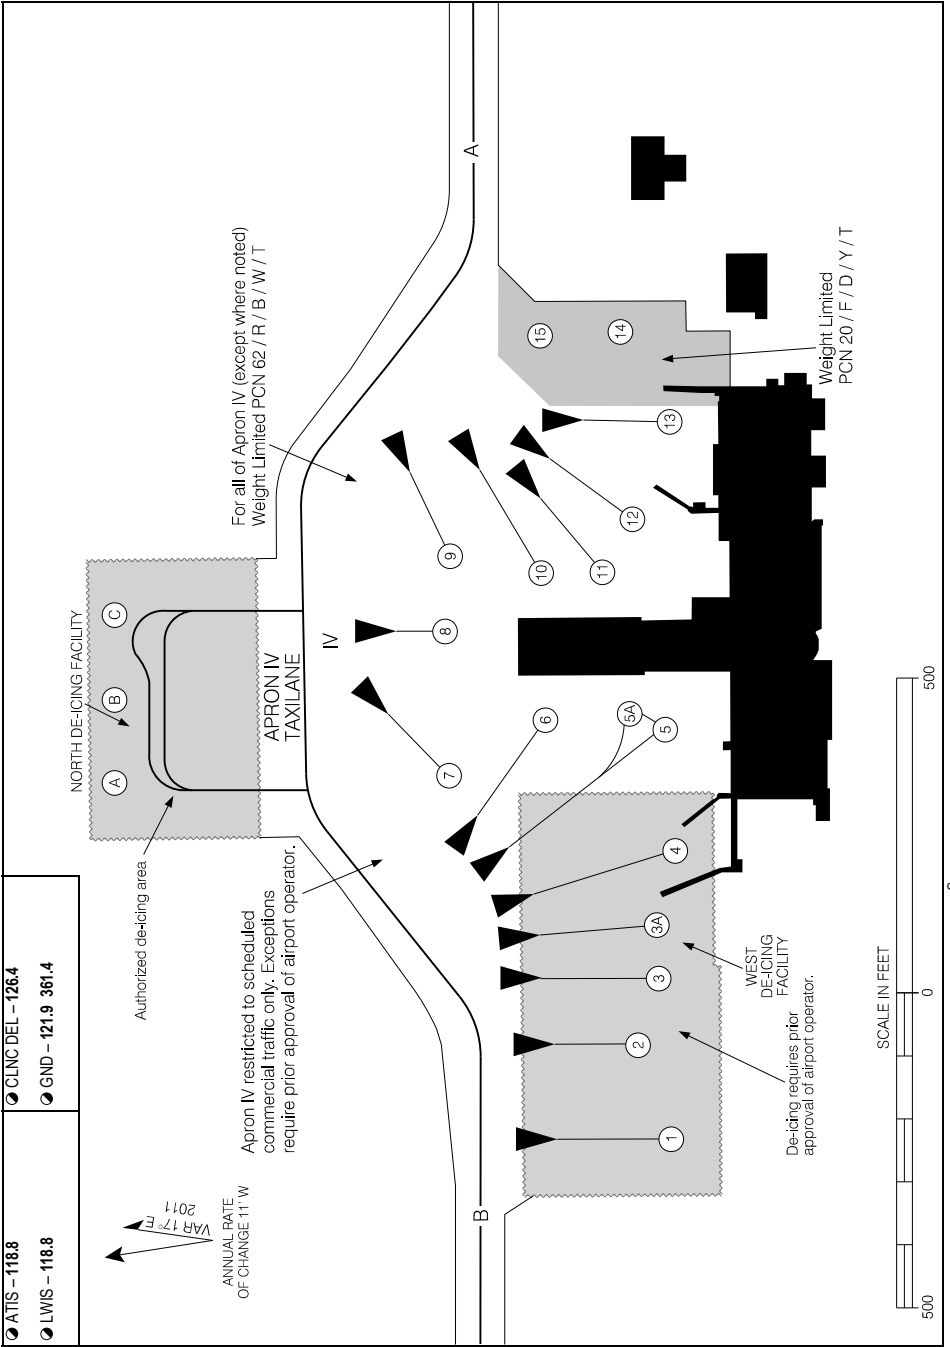

SCHEDULED COMMERCIAL AIRCRAFT

1. De-icing assignments will be communicated to commercial aircraft via de-icing providers and individual company processes.
2. **NO de-icing will occur until an assignment has been issued.**

NON-SCHEDULED AIRCRAFT

1. Aircraft requiring an assignment shall contact a de-icing provider, who will request the assignment.
2. De-ice control will issue the assignment between scheduled commercial movements and notify the de-icing provider. The de-icing provider will provide the assignment to the aircraft.
3. If the non-scheduled aircraft misses their assignment, a new assignment must be obtained.
4. **NO de-icing will occur until an assignment has been issued.**

REDUCED VISIBILITY PROCEDURES

Visibility Procedures (RVR less than 2600 to 1200 ft)

Reduced Visibility Taxi Routes

Taxi routes will be coordinated by ATC. All taxiways and runways are available except for rwy 08/26, taxiway D north of taxiway C, and taxiway C east of taxiway E. Uncontrolled taxiways may be used at the discretion of the pilot. Vehicles responding to an emergency are not required to follow the routes.

Departures

Rwy 17/35 will be used for departures.

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-off as described in CAP GEN Operating Minima.

Surface Movement Guidance Control System

All taxiway intersections are equipped with rwy guard lights.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR.

Arrivals

Taxi routes will be coordinated by ATC.

Airport Services and Equipment Available under Reduced Visibility Operations

All taxiway intersections are equipped with rwy guard lights.

Pilots may plan their arrivals using the above table of threshold-to-exit-point distances. The distances are measured from the landing threshold to the point of the intersection of the runway centreline and the extended exit taxiway centreline.

During HIRO operations, the Control Tower may nominate the rwy exit. Compliance with ATC nomination of rwy exit is at the pilot's discretion and should be acknowledged.

REMARK: For detailed information on High Intensity Runway Operations, pilots may refer to AIP RAC 4.4.10

TAXI CHART

EFF 29 DEC 22

CYYC

LOW/REDUCED VISIBILITY PROCEDURES

**Low Visibility Procedures (RVR less than 1200 to 600 ft) and
Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)****Low/Reduced Visibility Taxi Routes**

Anticipated taxi routes will be identified, and should portions thereof be unavailable, alternate routes will be identified.

In the event that an aircraft must taxi across the airfield for departure, the RVR values along the taxi route must be used to determine visibility limitations.

Once an aircraft has commenced taxi for takeoff, or taxi after landing, and the visibility falls below the published level of service on the given taxiway, the aircraft may continue to taxi.

Rwy 08/26 may be used as a taxiway.

Aircraft requiring imminent departure are permitted to tow during RVO but must obtain taxi routing clearances and follow all applicable airside traffic directives guidelines. Tow operations below 1200 RVR are not authorized on manoeuvring areas.

Engine run ups will not be allowed.

Departures

Departures during LVO will be on rwy 17L/35R. During RVO, rwy 17R/35L will be the preferential runway. The departure runway will be identified.

Runways 17L/35R, 17R/35L and 11/29 are equipped with high intensity edge lights and threshold/end lights. Rwy 17L/35R is equipped with centreline lights.

Departure taxi routes will be the most direct route to the threshold. Intersection departures are not permitted. If the primary route is unavailable, Calgary Tower may recommend a secondary route.

Exceptions for departures:

- Taxi to Rwy 11 may be approved from Apron VII and IX when RVR 11 is 1200 or greater
- Taxi to Rwy 11 may be approved from Apron I, East Deice and West Deice when RVR 11 AND 17R are 1200 or greater
- Taxi to Rwy 17R may be approved from Apron I, IX, East Deice and West Deice when RVR 17R is 1200 or greater
- Taxi to Rwy 17R may be approved from Apron VII when RVR 11 AND 17R are 1200 or greater.
- Taxi to Rwy 35L may be approved from Aprons III, IV, V, VI and VIII when RVR 35L is 1200 or greater
- Taxi to Rwy 29 may be approved from Apron I & II and IX when RVR 17R and RVR 29 are 1200 or greater.

LOW/REDUCED VISIBILITY PROCEDURES

CYC

LOW/REDUCED VISIBILITY PROCEDURES

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-off as described in CAP GEN Operating Minima.

Surface Movement Ground Control System

All taxi hold positions on taxiways leading to Runway 17L/35R are equipped with stop bars.

Prior to manoeuvring on aprons, aircraft are recommended to contact Apron Advisory Service.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR

Arrivals

Arrivals during LVO will be on rwy 17L/35R. During RVO, rwy 17L/35R will be the preferential runway. ATC will designate the arrival runway.

Calgary Tower will direct arrival taxi routes in order to ensure the aircraft exits the runway at the first available exit, and will provide instruction from the runway to the Apron.

Airport Services And Equipment Available Under Low Or Reduced Visibility Operations

Airport Surface Detection Equipment (ASDE)

Upon request "follow-me" service can be provided to aircraft. Requests should be made with as much notice as possible.

DE-ICING OPERATIONS

De-icing Procedures

1. Contact CALGARY DE-ICE on 129.5 thirty (30) min prior to push-back with aircraft type and estimated push-back time.
2. Contact CALGARY DE-ICE on 129.5 five (5) min prior to push-back to confirm treatment type and DE-ICE pad assignment.
3. Follow normal pushback procedures and advise Apron Advisory EAST or WEST DE-ICE pad has been assigned.
4. East Pad - Enter from Twy J at Twy JQ. When instructed by GROUND CONTROL, contact PAD CONTROL on 129.12 prior to entering pad.
5. West Pad - Enter from Twy J at Twy JV. When instructed by GROUND CONTROL, contact PAD CONTROL on 122.35 prior to entering pad.
6. Follow PAD CONTROL instructions, signboards and guidance lines to the assigned staging position or de-icing bay and confirm "BRAKES SET" when in position with nosewheel on stop bar.

AUTOMATIC MODE (Active signboard guidance)

As the aircraft enters the de-icing bay, proximity capturing devices will recognize the aircraft. The signboards will actively guide the aircraft to the stop bar position and the signboard will advise SET PARK BRAKE.

MANUAL MODE (Automatic mode not operational)

Follow the instructions from PAD CONTROL and stop on the designated stop bar. Nosewheel should be placed as close to the stop bar marking as possible.

CAUTION: The wingtip to tail clearance for aircraft taxiing in the EAST pad from JQ behind staged aircraft is only assured when the staged aircraft nosewheel is on the stop bar.

7. If assigned a staging bay, monitor PAD CONTROL until further instructed.
8. When directed by PAD CONTROL, contact ICEMAN (East 123.35, West 122.72) and confirm "BRAKES SET, AIRCRAFT CONFIGURED FOR DE-ICE."
9. When de-ice is complete, do not move aircraft. When directed by ICEMAN, contact PAD CONTROL on assigned frequency.
10. Advise PAD CONTROL when ready to taxi. PAD CONTROL will assign appropriate GROUND CONTROL frequency to obtain taxi clearance.
11. Queuing is not permitted on Twy J, staging positions are provided on both EAST and WEST pads, reference DE-ICE Facility diagram.

CAUTION:

During the de-icing process, thrust setting must not exceed ground idle and/or propellers must remain feathered at all times.

Engine run-ups will only be approved by PAD CONTROL or ICEMAN when operations permit and when it is safe to do so. Engine fan blade ice shedding run-ups are prohibited on the de-ice pads.

De-icing pad aircraft exit to Twy Bravo.

Apron taxilane up to Bay 5 will accommodate aircraft with wingspans of 213' (65m) and smaller.

Apron taxilane Bay 6 to Bay 9 will accommodate aircraft with wingspans of 118' (36m) and smaller.

Aircraft in staging positions must place nosewheel on stopbar to ensure clearance to taxilane.

Apron 1 Exit Routing Procedure and Restrictions (see chart below)

Routing
Apron I Advisory (121.3 - limited hours) will normally direct departing acft to a taxi position fix dependent upon active runways.
Twy JT restricted to aircraft with wingspan of 118' or less.
Twy GB is restricted to one-way westbound and to aircraft with wingspan of 118' or less.
Twy GD restricted to one-way westbound

Multilateration: Acft transponders must be kept on at all times when manoeuvring on runways, taxiways and all aprons.

REDUCED VISIBILITY PROCEDURES

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

If any portion of the airport drops below $\frac{1}{2}$ SM or 2600 RVR but is at or above $\frac{1}{4}$ SM or 1200 RVR, the airport is considered to be operating in RVOP with no restrictions to aircraft or vehicles.

If any portion of the airport drops below $\frac{1}{4}$ SM or 1200 RVR, provided the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR, the following procedures shall be implemented:

- Any runway that is below $\frac{1}{4}$ SM or 1200 RVR will not be used for arrivals or departures.
- Restrictions apply to vehicles and aircraft on the manoeuvring area. Only one aircraft, helicopter or vehicle will be given permission to operate on the manoeuvring area at any given time (except as permitted below under Vehicle Exceptions).
- Towing of aircraft on the manoeuvring area is not permitted.

Departures

An aircraft may be taxied for departure if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility drops below $\frac{1}{4}$ SM or 1200 RVR after taxi clearance was issued, the aircraft may continue to taxi.

An aircraft may depart during RVOP operations provided the RVR serving the departure runway is at or above $\frac{1}{4}$ SM or 1200 RVR.

Arrivals

An aircraft may land and taxi if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

Arrivals will be in accordance with applicable approach minima or approach ban considerations. After landing, the aircraft may taxi provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility for the runway of intended use drops below $\frac{1}{4}$ SM or 1200 RVR after an arriving aircraft crosses the final approach fix (FAF), the aircraft may land and taxi in.

Vehicle Exceptions

A group of vehicles may be considered one movement provided they are traveling together and use a single call sign.

Vehicles are permitted to operate on an inactive runway. Once vehicles are established and restricted to remain on the inactive runway, RVOP may resume on the remaining manoeuvring area.

Emergency vehicles responding to emergency situations are exempt.

DE-ICING OPERATIONS

De-icing Procedures

1. When de-icing is required, ctc EDMONTON DE-ICE on 122.850 30 min prior or as soon as possible with de-icing requirements. AEROMAG will assign the expected de-icing pad or holding area according to de-icing flow.
2. Prior to pushback and for taxi clearance ctc GROUND CONTROL on 121.700 with de-icing pad assignment.
3. On the Main Apron, hold short of the assigned de-icing pad and ctc AEROMAG PAD CONTROL on 122.775.
4. Follow AEROMAG PAD CONTROL instructions and guidance lines to the assigned de-icing bay or staging bay and confirm "BRAKES SET" when in position. Monitor GROUND CONTROL on 121.700 at all times.
5. When directed by AEROMAG PAD CONTROL, ctc ICEMAN on 130.125 (136.535 backup frequency) and confirm "BRAKES SET, AIRCRAFT CONFIGURED and ENGINES IDLE FOR DE-ICE."
6. When de-ice is complete, do not move aircraft. When directed by ICEMAN, ctc AEROMAG PAD CONTROL on 122.775 to obtain taxi instructions.
7. Follow AEROMAG PAD CONTROL instructions to exit de-icing. Hold short of Twy ALPHA and ctc GROUND on 121.700 to obtain clearance. Holding short of Twy ALPHA is only relevant to DF1 and DF2. DF3 aircraft exit onto Apron I.

DE-ICING OPERATIONS**Arrival Communication Procedures**

1. Aircraft arriving at YMM will exit the runway and contact ground frequency (121.9) to request taxi instructions.
2. YMM Tower (or YZF Yellowknife Radio during the hours of 2245-0615 local) will give taxi instructions.

Departure Communication Procedures

1. Contact ground 121.9 (or Yellowknife Radio 118.1 during the hours of 2245-0615 local) for runway and taxi instructions.
2. Aircraft on Apron II (North) will contact YMM Ground on 121.9 (or Yellowknife Radio 118.1 during the hours of 2245-0615 local) for runway and taxi instructions.

De-Ice Bay Procedure

Fort McMurray International operates a central de-icing facility which is located on the main/south ramp (Apron I) on the south side of the airport. All bays are capable of both engine on and engine off de-icing operations concurrently. All de-icing is to be accomplished at this facility.

1. De-icing is accomplished by each of the ground handling companies that operate at the Fort McMurray International Airport.
2. Coordinate any special treatment with your Ground Handler prior to taxi to the CDF.
3. Entry point to the CDF, if transitioning from the North, is via taxi-way J to Apron I – use west entrance.
4. If required to hold – the designated holding area is to your immediate right upon entering Apron I.
5. CDF flow is from west to east.
6. Contact YMM Ground on 121.9 (or Yellowknife Radio on 118.1 during the hours of 2245-0615 local) for runway and taxi instructions.
7. Exit is via taxi-way H.

REDUCED VISIBILITY PROCEDURES

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)

If any portion of the airport drops below $\frac{1}{2}$ SM or 2600 RVR but is at or above $\frac{1}{4}$ SM or 1200 RVR, the airport is considered to be operating in RVOP with no restrictions to aircraft or vehicles.

If any portion of the airport drops below $\frac{1}{4}$ SM or 1200 RVR, provided the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR, the following procedures shall be implemented:

- Any runway that is below $\frac{1}{4}$ SM or 1200 RVR will not be used for arrivals or departures.
- Restrictions apply to vehicles and aircraft on the manoeuvring area. Only one aircraft, helicopter or vehicle will be given permission to operate on the manoeuvring area at any given time (except as permitted below under Vehicle Exceptions).
- Towing of aircraft on the manoeuvring area is not permitted.

Departures

An aircraft may be taxied for departure if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility drops below $\frac{1}{4}$ SM or 1200 RVR after taxi clearance was issued, the aircraft may continue to taxi.

An aircraft may depart during RVOP operations provided the RVR serving the departure runway is at or above $\frac{1}{4}$ SM or 1200 RVR.

Arrivals

An aircraft may land and taxi if the runway of intended use is at or above $\frac{1}{4}$ SM or 1200 RVR provided no other aircraft or vehicle is on the manoeuvring area.

Arrivals will be in accordance with applicable approach minima or approach ban considerations. After landing, the aircraft may taxi provided no other aircraft or vehicle is on the manoeuvring area.

If the visibility for the runway of intended use drops below $\frac{1}{4}$ SM or 1200 RVR after an arriving aircraft crosses the final approach fix (FAF), the aircraft may land and taxi in.

Vehicle Exceptions

A group of vehicles may be considered one movement provided they are traveling together and use a single call sign.

Vehicles are permitted to operate on an inactive runway. Once vehicles are established and restricted to remain on the inactive runway, RVOP may resume on the remaining manoeuvring area.

Emergency vehicles responding to emergency situations are exempt.

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 to 600 ft)**Expect Delays**

When low visibility procedures are in effect, ATC will restrict operations to one aircraft on the maneuvering area at a time (1 departure or 1 arrival at a time).

Departures

Only departures on Runway 36 or 18 shall be permitted. Intersection departures will not be permitted.

Although Winnipeg Tower does not control aircraft push backs or taxiing on aprons, pilots are recommended to contact Winnipeg Tower before maneuvering on Apron I.

Contact ATC for a start / taxi time.

Sequencing of Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is a minimum of:

Aircraft/Pilot Take-Off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

“AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR”

Arrivals

When Low Visibility Procedures are in effect the arrival RWY is 36 in accordance with applicable approach minima or approach ban considerations.

Winnipeg Tower will restrict operations to one aircraft on the maneuvering area at a time (1 departure or 1 arrival at a time). Approximately 6 movements per hour.

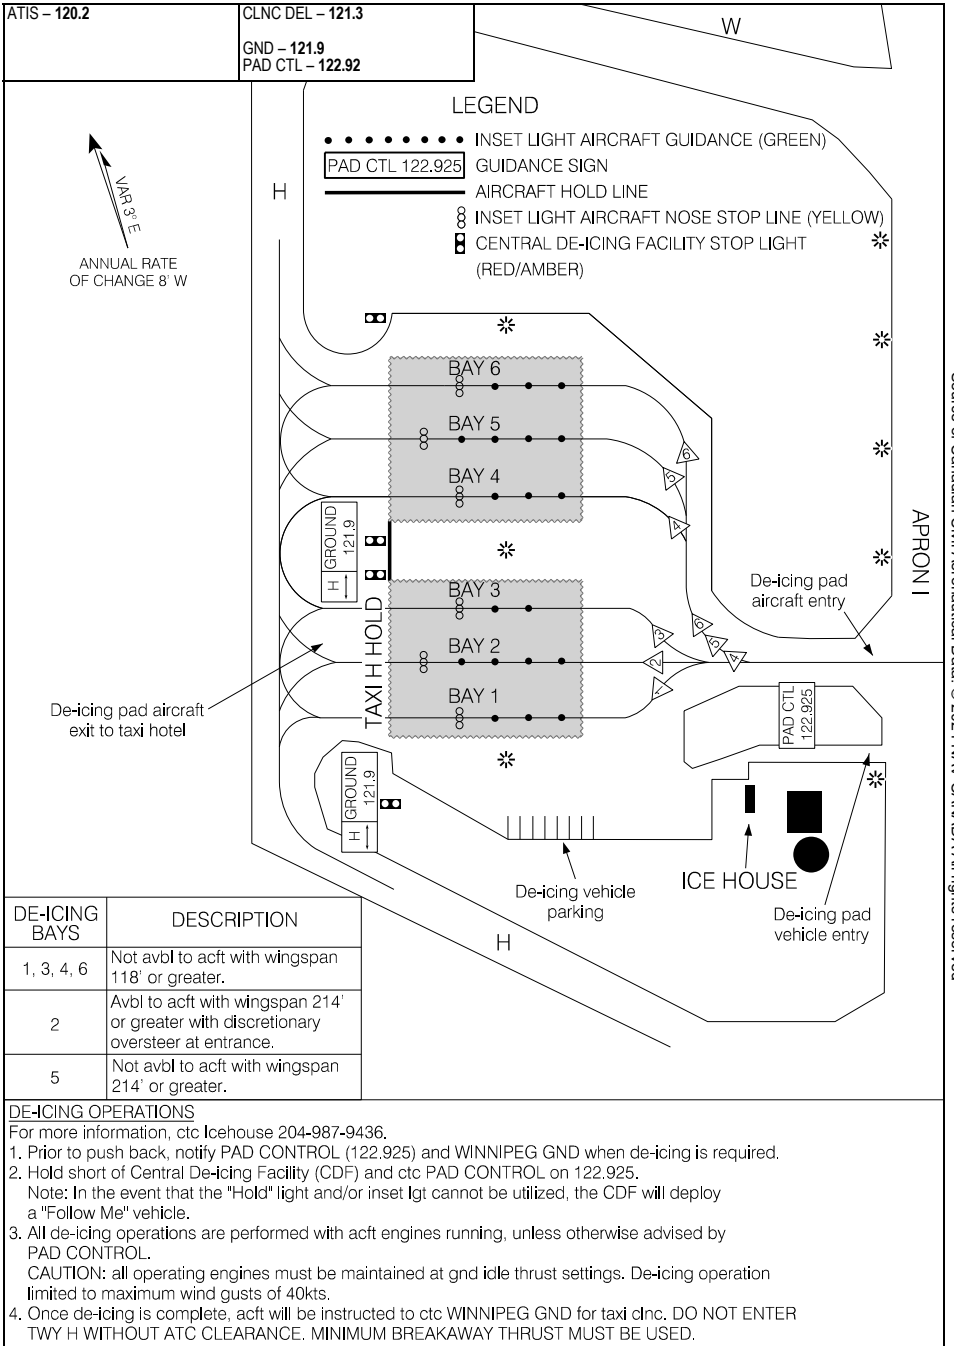

Airport Services and Equipment Available Under Low Visibility Operations

Airport Surface Detection Equipment (ASDE).

Runway Certification

Rwy	Certification
36	RVR 600
13	RVR 1200
31	RVR 1200
18	¼ SM (Based on reported visibility)

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (Less than RVR 1200 to RVR 600)**Application**

These procedures apply to ground movements of aircraft departing under low visibility conditions. Departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast.
“LOW VISIBILITY PROCEDURES IN EFFECT”

General**Low Visibility Taxi Routes**

Taxi routes during low visibility operations are exclusive to the following routes:

1. Route 1 – Taxiway C
2. Route 2 – Taxiway B, rwy 06, taxiway C.
3. Taxiway surfaces are painted with enhanced yellow and black centreline markings. Aircraft restricted to one movement in or out at any time during low visibility operations. Alternate routing may be specified by ATC as required.

ATC may find it necessary to suspend, restrict, or terminate low visibility operations.

Departures

Sequencing of Aircraft Ground Movements for Take-off.

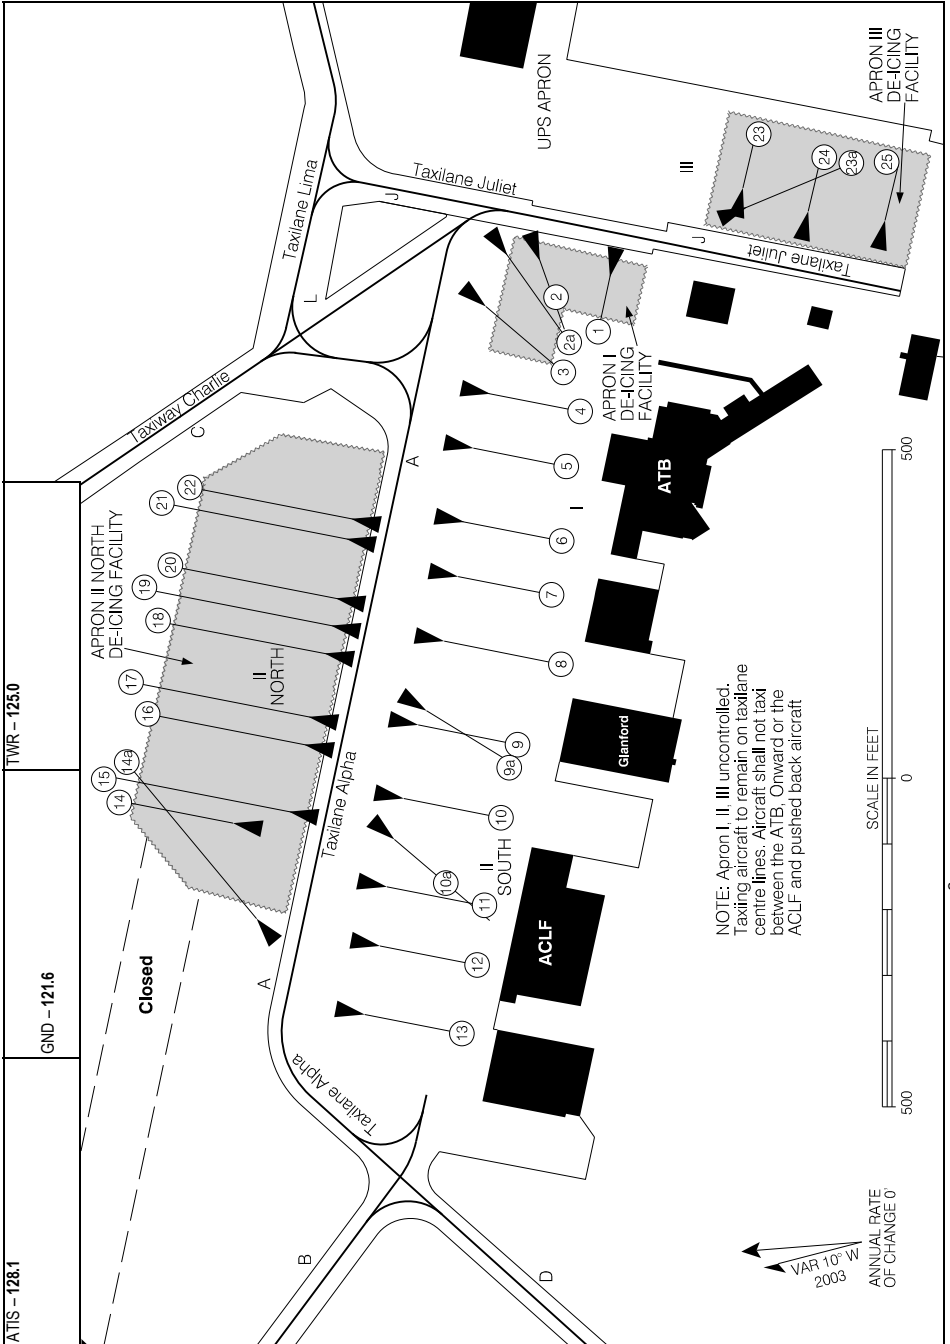

Do not request taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

Arrivals

Taxi route will be specified by ATC.

DE-ICING OPERATIONS

Gate De-icing – Originating Flights

1. Gate de-icing is approved for environmental frost under the following conditions:
 - Active precipitation is not forecasted for the operational period.
 - Apron conditions are such as to allow the recovery of spent fluid (no snow, ice, sand, gravel, etc.).
 - The required fluid to de-ice is optimal for the presenting frost and up to the minimum 1 litre/square metre.
 - Winds are light to variable (8 knots).
2. De-icing for originating flights will take place 60-90 minutes before scheduled departure time.
3. Staff will conduct initial inspection of acft to determine the requirement for de-icing and will proceed with spray if rqrd.
4. Airlines must ensure acft are configured and ready for de-icing prior to the above time. De-icing will take place under the assumption that originating flights are configured.
5. De-icing confirmation will be sent electronically or via fax to airline operations following de-icing. Flight crews requiring additional information may contact PAD CONTROL on 122.92.
6. No holdover time is provided for on gate de-icing.
7. The process of “**Pre-Spray**” (Lines 2-3) 60-90 mins before push is being reviewed due to frost regeneration (fall weather patterns with high humidity and close OAT/DP spread).
8. Unless requested of de-ice crews, the PIC is responsible for “**Pre-flight take off inspections**.” Any treatments by de-ice crews for Pre-Sprays will be followed by an “**appropriate post de-ice inspection**.” The “**Pre-Spray**” treatments 60-90 mins before push do not include a “**pre-take off**” inspection.

Gate De-icing – Turn Flights

1. All conditions of gate de-icing exist from above list.
2. De-ice crews will not interact with turn aircraft unless requested – Contact PAD CONTROL on 122.92 to arrange. There will be no pre-emptive contact with the aircraft without request for service. Pre-take off De-ice check remains with the flight crew unless a live spray is completed at pushback.

Centralized De-icing Facility Operations

1. Flow – North to South
 - Entry point is K or AA via Alpha. Acft must hold short of the CDF on the entry point and establish radio contact with PAD CONTROL on 122.92.
 Flow – South to North
 - Entry point is CC or BB via Alpha. Acft must hold short of the CDF on the entry point and establish radio contact with PAD CONTROL on 122.92.
2. Follow taxi instructions via East Line to Bays 1, 2, 3 via West Line Bays 4, 5, 6.
3. Aircraft will be staged on the East/West Line short of AA/BB when necessary.
4. When exiting CC/K – Acft must maintain listening watch on the E/W staging lines on 122.92 until reaching Twy A.

NOTE: Aircraft intended on returning to terminal gates after de-icing must drip dry for 25 minutes on CDF.

DE-ICING OPERATIONS

De-icing Requirements

1. Wings and Stabs refers to the upper surfaces of the wings, upper/lower surface of the Horizontal Stabilizers and both sides (including rudder) of the Vertical Stabilizer.
2. Fuselage includes all components from the front cabin doors aft and Wings and Stabs.
3. Full Body includes the cockpit/radome plus Fuselage, Wings and Stabilizers.
4. Individual treatments like “inspections only”, “radome”, “winglets” can be done upon request.
5. Hard leading edges tactiles/underwing inspections and treatments may require engine shut down if inlet is in close proximity to surface requiring attention.

DE-ICING OPERATIONS

OPÉRATIONS DE DÉGIVRAGE

Dégivrage à la barrière – vols cédulés

1. Le dégivrage aux portes d'embarquement est approuvé pour le givre dans les conditions suivantes :
 - Les précipitations actives ne sont pas prévues pour la période opérationnelle.
 - Les conditions du tablier sont telles qu'elles permettent de récupérer le fluide usé (pas de neige, de glace, de sable, de gravier, etc.).
 - Le liquide de dégivrage requis est optimal pour le givre présent et ce, jusqu'à un minimum de 1 litre / mètre carré.
 - Les vents sont de légers à variables (8 nœuds).
2. Dégivrage pour les vols cédulés aura lieu 60 – 90 minutes avant l'heure de départ cédulé.
3. Technicien doit faire une inspection initiale de l'appareil pour déterminer les besoins en dégivrage et vont procéder au dégivrage si requis.
4. Les sociétés aériennes doivent s'assurer que l'appareil est configuré et prêt pour le dégivrage. Le dégivrage va avoir lieu en prenant compte que les vols cédulés sont configurés.
5. La confirmation de dégivrage sera envoyée électroniquement ou par fax à la société aérienne après le dégivrage. L'équipage requérant de l'information additionnelle peut contacter CTL DÉGIVRAGE sur 122.92.
6. Aucun temps d'efficacité n'est fourni pour le dégivrage à la barrière.
7. Le processus de « **Pré-application** » (lignes 2-3), 60-90 minutes avant le refoulement est en cours de révision en raison de la régénération du givre (conditions météorologiques automnal, incluant une forte humidité et une relation étroite entre la TAE / PR).
8. À moins que les équipes de dégivrage ne le demandent, le commandant de bord est responsable des « **inspections avant le décollage** ». Tout traitement effectué par les équipes de dégivrage pour les pré-applications sera suivi d'une « **inspection post-dégivrage appropriée** ». Les traitements de « **pré-application** » de 60 à 90 minutes avant le refoulement n'incluent pas une inspection de « **pré-décollage** ».

Dégivrage à la barrière – vols en transit

1. Toutes les conditions de dégivrage aux portes d'embarquement existent depuis la liste ci-dessus.
2. Les équipes de dégivrage n'interagiront pas avec le virage des avions à moins que cela ne soit demandé – Contactez PAD CONTROL sur 122.92 pour organiser la manoeuvre. Il n'y aura pas de contact préventif avec l'aéronef sans demande de service. La vérification de dégivrage avant le décollage demeure à l'équipage de l'aéronef à moins qu'une application directe soit complétée au refoulement.

OPÉRATIONS DE DÉGIVRAGE

Opération au centre de dégivrage

1. Circulation – Nord vers Sud

- Point d'entrée est K ou AA via Apha. L'appareil doit se tenir à l'écart du CDF au point d'entrée et établir le contact radio avec CTL DÉGIVRAGE sur 122.92.

Circulation – Sud vers Nord

- Points d'entrée est CC ou BB via Alpha. L'appareil doit se tenir à l'écart du CDF au point d'entrée et établir le contact radio avec CTL DÉGIVRAGE sur 122.92.

2. Suivre les instructions pour le taxi via la ligne Est pour les baies 1,2,3 ou via la ligne Ouest pour les baie 4,5,6.
3. L'appareil sera mis en attente sur la ligne Est/Ouest à l'écart de AA/BB lorsque nécessaire.
4. À la sortie de CC / K – L'aéronef doit rester attentif aux lignes d'arrêt E / W et au 122.92 jusqu'à ce qu'il atteigne le Twy A.

Note : L'appareil qui doit retourner à la barrière doit rester au CDF pendant 25 minutes afin d'assécher l'appareil

Besoins en dégivrage

1. Ailes et Stabilisateurs se réfère aux surfaces supérieures des ailes, aux surfaces supérieures / inférieures des Stabilisateurs Horizontaux et des deux côtés (y compris le gouvernail) du Stabilisateur Vertical.
2. Le Fuselage comprend toutes les composantes, des portes de cabine avant vers l'arrière ainsi que les Ailes et Stabilisateurs.
3. L'appareil complet comprend la cabine de pilotage, le radôme ainsi que le Fuselage et les Ailes et Stabilisateurs.
4. Des traitements individuels tels que « inspections seulement », « radôme », « ailettes » peuvent être effectués sur demande.
5. Les inspections tactiles et les traitements sous les ailes peuvent nécessiter la fermeture d'un moteur si l'entrée est à proximité de la surface nécessitant une attention.

TAXI CHART

Notes

Twy "K" is uncontrolled and is restricted to aircraft with wingspans of 41.15m/135ft (B757W) or less and an Aircraft Load Rating of 9.0 or less. Other aircraft may be authorized with prior approval from operator (416) 776-3056.

Discretionary oversteering required for aircraft with wingspans 38m/124ft (B757) or greater:

- Rwy 06L onto "E", "D3" and "D5".
- Rwy 24R onto "D3", "E", "D4" and "D10/D8 southbound".

A340-500/600, A350-900/1000, B777-300, and A380 discretionary oversteering required at all intersections.

Specific aircraft operations plan in effect for aircraft with wingspans 65m/214ft up to 79.9m/262ft. Restrictions in place include;

- No holding short of Runway 06L/24R after exit from Runway 06R/24L.
- Aircraft (as defined above) operations on any parallel taxiway system, such as Alpha-Bravo, Charlie-Delta, or Delta-Victor (Alpha to Echo), restrict operations on adjacent taxiway to aircraft with wingspans less than 36m.
- Strict adherence to taxiway centre line is required all times.
- Discretionary oversteering is required at all intersections.
- No taxiing on apron taxi lane between AJ and AK (between gates C31-C34).
- No taxiing on apron taxi lane between AJ and AT (between gates B15-B18).
- No turns from twy E onto CDF Pads 1 through 6.
- When aircraft on taxilane 5S, strict adherence to centreline. Taxilane 5 between 5A and 5D closed. Taxilane 6 between 6A and 6C closed, remainder of taxilane 6 restricted to aircraft with wingspan less than 36m/118'. Simultaneous use of taxilane 7 & 8, max span 64.9m/213'.
- No taxiing on twy D between twy D4 and twy E.
- No taxiing on twy B between rwy 05/23 and twy J.
- When aircraft taxiing within Holding Bays rwys 06L/24R/05, adjacent parallel taxilane restricted to aircraft with wingspans less than 36m.
- Tow only authorized onto parking stands H1 and H10.

While taxiing on twy V (Pad 1) and twy T (Pad 5) through the CDF strict adherence to the centreline is required. When in contact with ATC use Centre Lane. When in contact with Pad Control or Iceman, use assigned Lane. Pad 1 (twy V) and Pad 5 (twy T) Centre Lane will accommodate aircraft with wingspans 79.9m/261ft and smaller. Aircraft with wingspans less than 36m may use North/South Lanes.

TAXI CHART

Hot Spots

Note: HS 4 to 8 - Short distance between parallel runways. Manage your taxi speed. Expect to hold short of parallel runway.

HS 1 – Taxiing northbound on rwy 33R aircraft fail to hold short of and incur on rwy 05/23.

HS 2 – Taxiing northbound on twy B aircraft miss turn onto twy H and incur on rwy 05/23.

HS 3 – Taxiing eastbound on twy H aircraft continue onto twy Q and incur on rwy 23.

HS 4 – Exiting rwy 24L onto twy D8 aircraft fail to hold short of and incur on rwy 06L/24R.

HS 5 – Exiting rwy 24L onto twy D4 aircraft fail to hold short of and incur on rwy 06L/24R.

Note: Angled rwy hold position in effect on twy D4 south of rwy 06L/24R.

HS 6 – Exiting rwy 06R onto twy D3 aircraft fail to hold short of and incur on rwy 06L/24R.

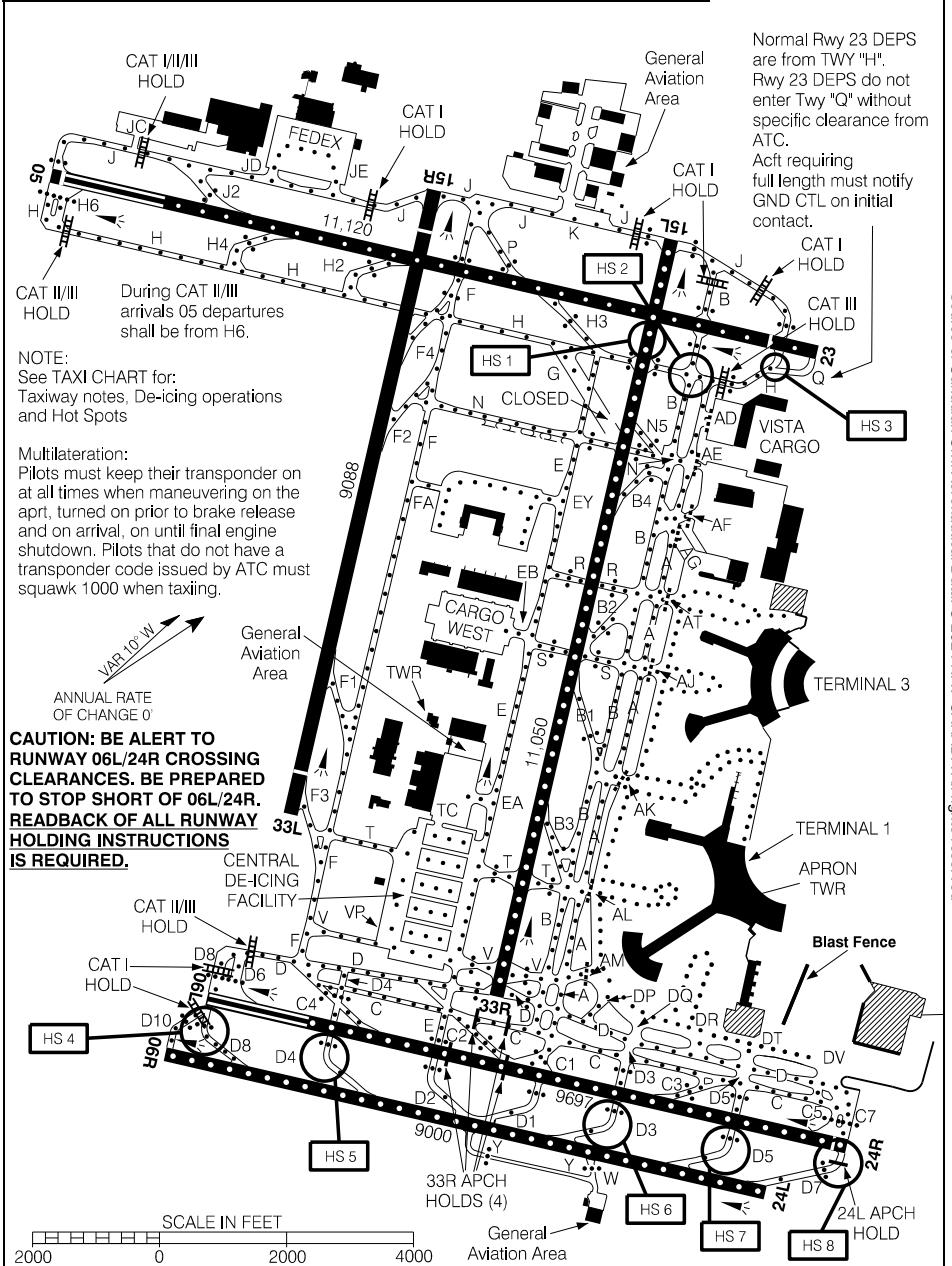

HS 7 – Exiting rwy 06R onto twy D5 aircraft fail to hold short of and incur on rwy 06L/24R.

Note: Angled rwy hold position in effect on twy D5 south of rwy 06L/24R.

HS 8 – Taxiing southbound on twy D7 aircraft fail to hold short of the 24L approach hold line and incur on rwy 06R/24L.

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 to 600 ft)

Application

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the ATIS broadcast:

“LOW VISIBILITY PROCEDURES IN EFFECT”

General

Low Visibility Taxi Routes

Typical taxi routes are shown on the Low Visibility Taxi Charts. Taxiway surfaces are painted with enhanced yellow and black centerline markings. In addition, taxiways A, C, F, H, J, N, T, P, R, S, V, E, D, B, T1, and T3 aprons are equipped with green centreline lights. Yellow in-set taxiway intersection lights that consist of three lights spaced 1.5 meters apart at 90 degrees to the direction of travel are located at taxiway/taxiway intersections and apron entry/exit points coincident with lighted locations signs. Aircraft may be directed to hold or report by any of these positions.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area. In the event of an ASDE failure, ATC may suspend, restrict or terminate low visibility operations.

Departures

When low visibility procedures are in effect the Departure runways are 05, 06L and 33R. Intersection take-offs from 06L are not authorized. Intersection take-offs on 33R from Victor Taxiway and on 05 from H6 may be assigned by ATC.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

Stop Bar/Guard Light system

Each taxiway entrance onto runways 05, 06L and 33R is equipped with a stop bar consisting of red in-set lights and red elevated lights located at the taxi holding position. Yellow flashing runway guard lights (wig-wags) are installed at each end of the stop bar. When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

“AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR”

Arrivals

When low visibility procedures are in effect the Arrival runways are 05 and 06L. For 05, approved exits are Taxiways F (northbound), H3, B, H/J and Q. For 06L, approved exits are Taxiways C1, C3 and C7. Aircraft exiting either runway must proceed beyond the alternating green and yellow centreline lights to ensure the aircraft is clear of the runway and the ILS sensitive area.

Aircraft engine run ups cannot commence during Low Visibility conditions.

Multilateration:
Pilots must keep their transponder on at all times when maneuvering on the aprt, turned on prior to brake release and on arrival, on until final engine shutdown. Pilots that do not have a transponder code issued by ATC must squawk 1000 when taxiing.

Aircraft exiting at the end of runway 06L on the centreline lighted C7 taxiway, must proceed beyond the alternating green and yellow centreline lights to ensure the aircraft is clear of the runway and the ILS sensitive area.

DE-ICING OPERATIONS

CENTRAL DE-ICING FACILITY (CDF)

Overview

All de-icing ops are performed with acft engines oprg, unless otherwise advised by Pad Control or ICEMAN.

Pad 1 & 5

- Centre lane will accommodate all acft.
- Acft with wingspans less than 36m may use North/South lanes.

Pad 2, 3, 4 & 6

- Centre lanes will accommodate acft with wingspans 64.9m/213ft and smaller.
 - Acft with wingspans less than 36m may use North/South lanes.
1. Prior to departing Parking Position, ctc CLNC DEL/APRON/GND (as applicable) and advise, "ACFT DE-ICING REQUIRED".
 2. On twys T, V and E, hold short of ICE# and when directed by Ground Control monitor Pad Control on 131.17. Follow Pad Control taxi instructions to the entrance of the de-icing pad.
 3. When directed by Pad Control, ctc ICEMAN on the assigned freq. (129.62 or 131.37).
 4. Follow verbal instructions, guidance displays and lights (as applicable) into staging and/or de-icing bays.
 5. Once aircraft is in final stop position, brakes are set and aircraft configured for de-icing, ctc ICEMAN and advise, "BRAKES SET, ACFT CONFIGURED, READY TO DE-ICE". At this time, pass along any specific fluid and/or treatment requirements.
 6. After de-icing, do not move aircraft. Ctc Pad Control on 131.17 when instructed by ICEMAN to obtain taxi instruction.
 7. Follow Pad Control instruction designated exit points. When instructed by Pad Control ctc Ground Control on assigned freq.
 8. Specific aircraft operations plan in effect for aircraft with wingspans 65m/214ft up to 79.9m/262ft. Restrictions in place include:
 - For Central De-icing Facility (CDF) operations, no turns from twy E into any of the de-icing pads are permitted. The only taxi routes permitted for de-icing are via twy T into Pad 5 and via twy V into Pad 1.

ENGINE FAN BLADE ICE SHEDDING PROCEDURES

CYYZ

Single engine taxi operations should not be used during contaminated airfield conditions or when operations require the crossing of active runways. This will enhance safety and reduce the likelihood of engine inlet contamination during active precipitation, while eliminating any requirement to conduct engine-start activities on the airfield.

The completion of aircraft engine run-up for engine fan blade ice shedding must be conducted on taxiway areas as outlined in the Engine Fan Blade Ice Shedding Chart. Strict adherence to the centerline is mandatory during engine fan blade ice shedding. Proper coordination with air traffic control (ATC) (clearance delivery, ground, or tower) is required.

On initial contact with Clearance Delivery (121.3 MHz), flight crews shall advise:

- De-icing requirements
- Run-up requirement prior to take-off
- Duration of run-up (if required)

Subsequently, if engine run-up requirements change, flight crews shall notify ATC as soon as practicable. The Airport Authority will ensure engine fan blade ice shedding areas in use are inspected and treated as required. Should taxiway surface conditions make engine run-up unsafe, flight crews shall coordinate with ATC to have the run-up conducted at the takeoff position.

Departing Rwy 06L or 06R Ice Shed Area (IS) see chart.

- IS1 Taxiway F between Taxiway T and Taxiway V.
- IS2 Taxiway D at the Runway 06L CAT II/III hold line.
- IS6 Taxiway B between Taxiway T and Taxiway V.
- IS11 Taxiway D between Runway 33R approach hold line and Taxiway A.

Departing Rwy 24R or 24L Ice Shed Area (IS) see chart.

LOW VISIBILITY PROCEDURES

Operations in Reduced and Low Visibility Conditions

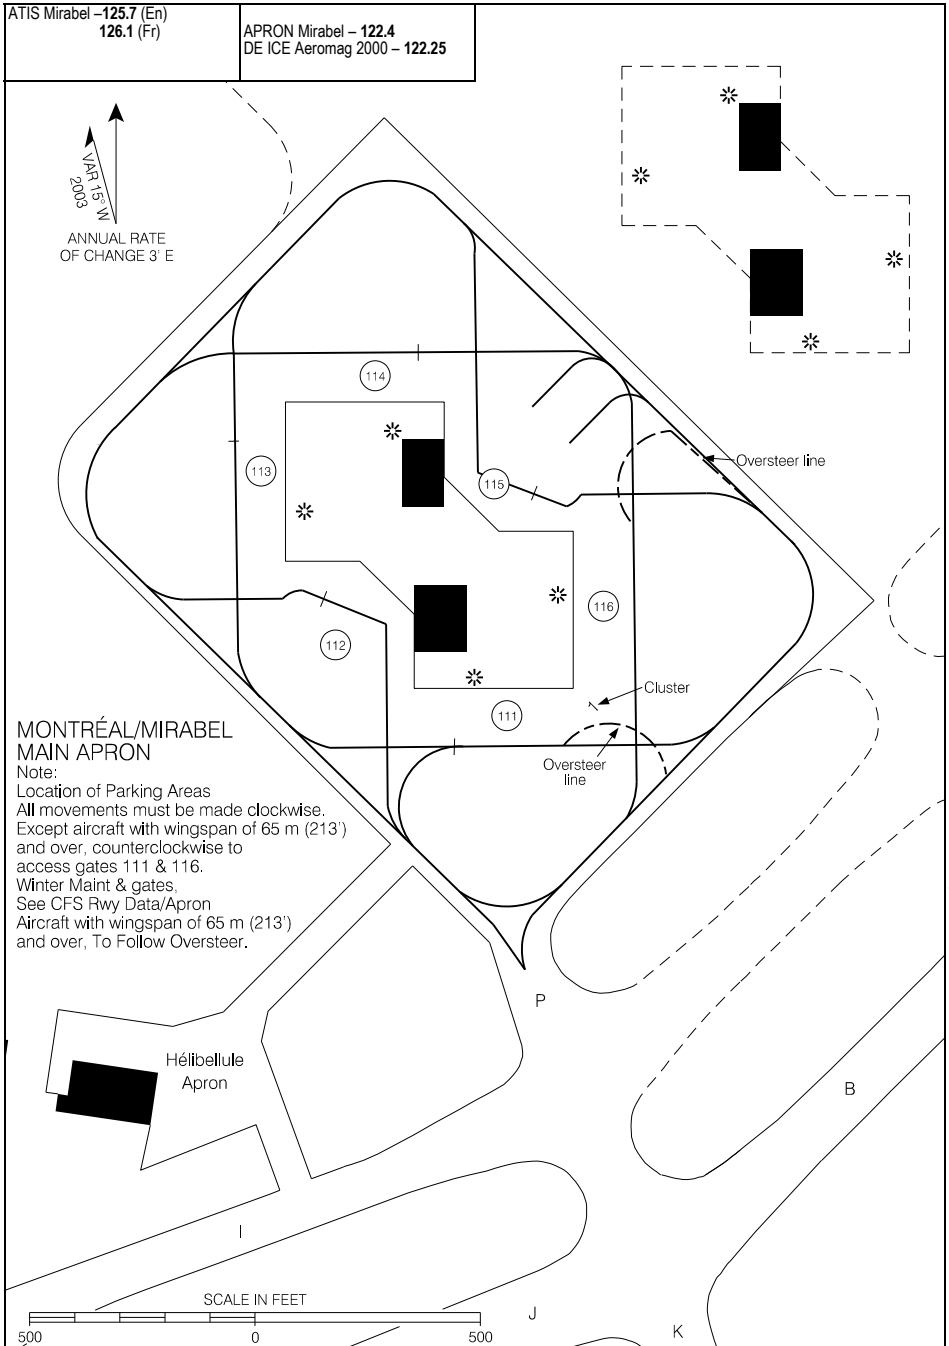

- Runway 06 is certified for use in low visibility operations (RVR600).
- Runway 24 is certified for use in reduced visibility conditions (RVR1200).
- Plan activation is mandatory when one of the RVR readings or the reported ground visibility is below $\frac{1}{2}$ SM. Runways 24 and 06 can be used.
- When the reading of one of the RVR readings or the reported ground visibility is less than $\frac{1}{4}$ SM while remaining at or above $\frac{1}{8}$ SM, runway 06 must be used.
- Only one aircraft movement (RVOP and LVOP) is authorised on the manoeuvring area. In low visibility operation (LVOP), it is mandatory that the "Follow Me" vehicle escorts the aircraft.
- With the exception of aircraft returning to aprons, movement of all traffic ceases when one of the RVR reading or the reported ground visibility is below $\frac{1}{8}$ SM.
- When the two RVR readings or the reported ground visibility increases and indicates $\frac{1}{2}$ SM or more, normal operations may resume.

Opérations en conditions de visibilité réduite et faible

- La piste 06 est homologuée pour les opérations en conditions de visibilité faible (RVR600).
- La piste 24 est homologuée pour les conditions en conditions de visibilité réduite (RVR1200).
- Le plan est déclenché lorsque la lecture d'un des RVR ou la visibilité au sol signalée est inférieure à $\frac{1}{2}$ SM. Les pistes 24 ou 06 peuvent être utilisées.
- Lorsque la lecture d'un des RVR ou la visibilité signalée au sol est de moins de $\frac{1}{4}$ SM mais de plus de $\frac{1}{8}$ SM, la piste 06 doit être utilisée.
- Un seul mouvement d'aéronef à tout moment (RVOP et LVOP) est autorisé sur l'aire de manœuvre. En condition de faible visibilité (LVOP), il doit obligatoirement être escorté d'un véhicule « Follow Me ».
- À l'exception des mouvements associés au retour des aéronefs aux aires de trafic, toute circulation au sol est interrompue lorsque la lecture d'un des RVR ou la visibilité signalée au sol est de moins de $\frac{1}{8}$ SM.
- Lorsque la lecture des deux RVR ou que la visibilité signalée au sol augmente et indique $\frac{1}{2}$ SM ou plus, le retour aux opérations normales peut être initié.

CARTE DE CIRCULATION

EFF 31 OCT 24

CYUL

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 to 600 ft)**1. Application**

These procedures apply to ground movements of aircraft during low visibility conditions (Runway Visual Range [RVR] less than 1200 to 600 ft). Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented to ensure the safe and efficient movement of aircraft. The following message will be added to the ATIS broadcast: **“LOW VISIBILITY PROCEDURES IN EFFECT”**

2. Surface Guidance and Control System

Surface guidance and control system have been installed to facilitate the ground movements of aircraft under low visibility conditions. This system, controlled by ATC, is:

- Taxiway centreline lights on holding bay 24R.
- Taxiway uni-directional centreline lights on taxiways A (between J and A4), A4 between A and the apron), B, B3, B4 (from B to the apron), B5, D, E (from the apron to I), H, I, J and K.
- Bi-directional centreline lights on the North ramp from taxiway B6 to A4, South ramp from B6 to gate 65, and East and West taxilanes up to gate 66.
- Stop Bars on all access to runway 06L/24R: on the holding bays of runways 06L and 24R, at the end of taxiway C before the intersection with runway 06L/24R and on taxiways B1, B2, B3, B4, B5, and B6 (illuminated under 1200 RVR).

NOTE: AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR

- Runway guard lights on all access to runways: on the holding bays of runways 06L, 24R and 06R, at the end of taxiway C before the intersection with runway 06L/24R, and on taxiways A, A1, A2, A3, A4, A5, A7, B1, B2, B3, B4, B5, B6, L and R (illuminated whenever the associated runway is in use).

NOTE: The above mentioned taxiway centreline lights and stop bars may be used at or above 1200 RVR.

LOW VISIBILITY PROCEDURES

CYUL

3. Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft and vehicles operating on the manoeuvring area. In the event of an ASDE failure, ATC may restrict low visibility operations.

4. “Follow me” Vehicle

A “Follow Me” vehicle will be provided on pilot's request.

5. Departure Routes

Runway 06L is the only one certified for take-offs during low visibility conditions (RVR less than 1200 to 600 ft). All departures under low visibility conditions will be on runway 06L. Intersection take-offs are not authorized.

Sequencing of aircraft ground movements for take-off: Do not request start, push back or taxi clearance until reported RVR is greater than:

Aircraft/Pilot Take-off Minima	Minimum RVR for Start
1200 RVR	1000 RVR
600 RVR	600 RVR

Unless otherwise advised by ATC, the following standard routes will be used, under low visibility conditions, for aircraft departing on runway 06L (see low visibility taxi chart).

From the main apron to the de-icing bay: aircraft will taxi on E and H or on D and K.

From the main apron to runway 06L: aircraft will taxi on the main apron to the holding bay runway 06L.

From the de-icing bay to runway 06L: aircraft will taxi on I, B, B4, and on the apron to the holding bay runway 06L.

From the de-icing bay to the main apron aircraft will taxi on taxiways J, A and A4.

From general aviation to 06L, aircraft will taxi on taxiway R, across threshold 24L, taxiways A5, A and A4, north side of the apron to the holding 06L.

6. Arrival Routes

Aircraft will exit runway 06L on taxiways B1, B3, B5 or holding bay 24R, taxiways B, B4 and then follow Apron Control instructions. Aircraft destined to the general aviation sector will exit the main apron at A4, and will taxi via runway 06R, and taxiways L and R.

Procédures en conditions de faible visibilité (RVR en dessous de 1200 jusqu'à 600 pieds)

1. Application

Ces procédures s'appliquent aux aéronefs circulant au sol en conditions de faible visibilité (portée visuelle de piste [RVR] en dessous de 1200 jusqu'à 600 pieds). Les départs et les arrivées en dessous de 600 RVR ne sont pas autorisés. Lorsque les conditions météorologiques indiquent que la portée visuelle de piste pourrait descendre en dessous de 1200 RVR, les procédures suivantes seront mises en place afin d'assurer la sécurité et l'efficacité des mouvements d'aéronefs. Le message suivant sera alors diffusé l'ATIS : « **PROCÉDURES EN CONDITIONS DE FAIBLE VISIBILITÉ EN VIGUEUR** ».

2. Système de guidage et de contrôle de la circulation de surface

Un système de guidage et de contrôle de la circulation de surface a été mis en place afin de faciliter le mouvement des aéronefs en conditions de faible visibilité. Ce système, commandé par l'ATC, comprend :

- Des feux axiaux de sortie sur la baie d'attente 24R.
- Des feux axiaux unidirectionnels sur les voies de circulation A (entre J et A4), A4 (entre A et l'aire de trafic), B, B3, B4 (de B à l'aire de trafic), B5, D, E (de l'aire de trafic à I), H, I, J et K.
- Des feux axiaux bi-directionnels sur la rampe nord de la voie de circulation B6 à A4, sur la rampe sud entre B6 et la barrière 65, et sur les lignes de guidage est et ouest jusqu'à la barrière 66.
- Des barres d'arrêt sur tous les accès à la piste 06L/24R : dans les baies d'attente des pistes 06L et 24R, à l'extrémité de C avant l'intersection de la piste 06L/24R et sur les voies de circulation B1, B2, B3, B4, B5, et B6 (allumées en dessous de 1200 RVR).

Note : NE JAMAIS TRAVERSER UNE BARRE D'ARRÊT ALLUMÉE

- Des feux de protection de piste sur les accès de toutes les pistes : les baies d'attente des pistes 06L, 24R et 06R, à l'extrémité de C avant l'intersection de la piste 06L/24R, et sur les voies de circulation A, A1, A2, A3, A4, A5, A7, B1, B2, B3, B4, B5, B6, L et R (allumés en tout temps sur les accès des pistes en service).

Note : Les feux axiaux de voies de circulation et les barres d'arrêt sus-mentionnées pourraient être utilisés dans des conditions égales ou supérieure à 1200 RVR.

3. Radar de surveillance des mouvements de surface (ASDE)

Un radar de surveillance des mouvements de surface est utilisé pour la localisation des aéronefs et des véhicules sur les aires mouvements. En cas de panne de ce radar l'ATC peut restreindre les actions en conditions de faible visibilité.

4. Véhicule « Follow Me »

Un véhicule équipé d'une affiche « Follow Me » sera disponible à la demande des pilotes.

5. Trajets pour les départs

Seule la piste 06L est homologuée pour des décollages en conditions de faible visibilité (RVR en dessous de 1200 et pouvant atteindre 600 pieds). Tous les départs en conditions de faible visibilité se feront sur la piste 06L. Les décollages à partir d'intersections ne sont pas autorisés.

Mise en séquence des mouvements au sol d'aéronefs pour décollages : ne pas demander de démarrer les moteurs, de refouler ou une autorisation de circuler à moins que le RVR rapporté ne soit supérieur aux valeurs suivantes :

Minima de décollage du pilote ou de l'aéronef	RVR minimum pour démarrer les moteurs
1200 RVR	1000 RVR
600 RVR	600 RVR

À moins d'avis contraire de l'ATC, les trajets suivants seront utilisés en conditions de faible visibilité pour les aéronefs au décollage de la piste 06L (voir carte de circulation en conditions de faible visibilité).

Du tablier principal en direction de l'aire de dégivrage : les aéronefs circuleront sur les voies de circulation E et H ou D et K.

Du tablier principal en direction de la piste 06L : les aéronefs circuleront sur le tablier jusqu'à la baie d'attente de la piste 06L.

De l'aire de dégivrage en direction de la piste 06L : les aéronefs circuleront sur les voies de circulation I, B, B4, et le tablier jusqu'à la baie d'attente de la piste 06L.

De l'aire de dégivrage en direction du tablier principal : les aéronefs circuleront sur les voies de circulation J, A et A4.

De l'aviation générale, la voie de circulation R, traverser le seuil 24L, les voies de circulation A5, A et A4, voie de circulation du côté nord de l'aire de trafic jusqu'à la baie d'attente 06L.

6. Trajets pour les arrivées

Les aéronefs quitteront la piste 06L en utilisant les voies de circulation B1, B3, B5 ou par la baie d'attente de la piste 24R, les voies de circulation B, B4 puis suivront les instructions du contrôle du tablier. Les aéronefs se dirigeant à l'aviation générale quitteront l'aire de trafic à A4 et utiliseront la piste 06R, et les voies de circulation L et R.

DE-ICING

1. Contact MONTREAL DE-ICE on 123.425, no later than 30 min prior push-back, with de-icing type.
2. On Twys J or K, hold short of the de-icing pad and contact AEROMAG PAD CONTROL 122.525.
3. On Twy E hold short of H or I and contact AEROMAG PAD CONTROL on 122.525.
4. Follow AEROMAG PAD CONTROL instructions and guiding lines to the assigned de-icing bay and confirm "brakes set" when in position.
5. On AEROMAG PAD CONTROL instructions, contact ICEMAN on 123.125 & confirm aircraft configured for de-icing and engines at idle.
6. When de-icing is completed and on ICEMAN instructions only, contact AEROMAG PAD CONTROL on 122.525 before moving aircraft.
7. Exiting de-icing pad on AEROMAG PAD CONTROL instructions contact ground control:
 - on Twy J, holding short of Twy U,
 - on Twy K, holding short of Twy C,
 - on Twy H or I holding short of Twy E.

De-icing bays capacity:

- 1 & 3: Maximum wingspan 36m (118');
- 2: Maximum wingspan 80m (262');
- 4, 5 & 9: Maximum wingspan 65m (213');
- 6 & 8: Maximum wingspan 36m (118');
- 7: Maximum wingspan 45.8m (150');

PLAN OF OPERATIONS IN THE ABSENCE OF APRON CONTROL

CYUL

- 6** Push-back facing West.
- 7** From gate 11B, aircraft with a wingspan of 36m (118') or greater push back to start box 10 and taxi to Alpha Mike for all rwy's except 06R.
- 10** From gates S1 to S4, aircraft with a wingspan of 36m (118') or greater push back facing West of start box 14.
- 14** After push back, tow to start box S prior to engine start.

NOTE: Refer to CFS - PRO section for Procedures description.

START BOXES NOTES

- 1** From gate 85, push back facing North on start box 1.
- B** From gates 56, 58, 60, 64, 66 and 73, B737 and aircraft with wingspan of 36m (118') or greater tow to start box B facing West.
- 5** At arrival for gates 80, 82, 84, 86, S1, S2, S3, and S4, broadcast your intentions before taxiing in.

Between Gates 47 and 49 prohibited to acit with wingspan of 36m (118') or more.

Guide line between gates 73 and 85 prohibited to aircraft with a wingspan of 36m (118') or more.

Prohibited to acit with wingspan greater than 36m (118').

REDUCED VISIBILITY PROCEDURES

Reduced Visibility Procedures (RVR less than 2600 to 1200 ft)**Reduced Visibility Operations - 24 hours**

Reduced Visibility Operations on runway 06-24: these are operations when reported visibility is less than RVR 2,600 feet or ½ statute mile and greater than or equal to RVR 1,200 feet or ¼ statute mile, per advisory circular CI 302-001.

Low visibility operations (LVOP) (below RVR 1200') are not permitted.

Departures & Arrivals**Follow-me car**

A "Follow-me" car will be available at all times, under any circumstances, upon a pilot's request. This service is available for one aircraft at a time based on first come, first served principles; some exceptions may apply.

During RVOP conditions, run-ups and towing will not be authorized on the maneuvering areas. Furthermore, vehicle access to the maneuver area during reduced visibility operations is restricted to essential operational functions only.

Night Only: When reported visibility is less than RVR 1800 or 3/8 SM, a "Follow-me" car is mandatory per advisory circular AC 302-004.

Operation Terms

20 minutes prior to a flight's departure time, the pilot shall contact NAV CANADA's ground controller to request a "Follow-me" car escort for taxiing on the manoeuvring area.

The pilot shall provide the following information:

- Exact position on the airfield (gate or FBO);
- Type of aircraft and airline;
- Flight departure time (if available);
- Runway used for take-off;

The "Follow-me" car will position itself 30m in front of the aircraft. Hazard lights will be activated when ready for taxiing and for the duration of the escort procedure.

Upon receiving authorization to proceed, the "Follow-me" car will follow the guide lines at no more than 30kph (16 knots) up to the desired destination.

Runway Level of Service

Rwy 06	RVR 1200
Rwy 24	(¼ sm)

Procédure d'opérations avec une visibilité réduite (RVR en-dessous de 2600 jusqu'à 1200 pieds)

Opérations visibilité réduite 24 heures

Les opérations effectuées sur la piste 06-24 : lorsque la visibilité signalée est inférieure à un RVR 2600 ou ½ mille terrestre, mais supérieure ou égale à une RVR 1200 ou ¼ mille terrestre, est en conformité avec le circulaire CI 302-001.

Les opérations par faible visibilité (LVOP) (en bas de RVR 1200') ne sont pas permises.

Départs & Arrivées

Véhicule « Follow-me »

Un véhicule « Follow-me » sera disponible en tout temps, pour toutes circonstances, à la demande des pilotes. Ce service s'applique pour un vol à la fois, sur une base de premier arrivé, premier servi, sauf exception.

Lors d'opérations RVOP, aucun remorquage ni essai moteur n'est permis sur les aires de manœuvre. De plus, l'accès par véhicule à l'aire de manœuvre lors de conditions de visibilité réduite sera restreint aux fonctions essentielles aux opérations seulement.

Nuit seulement : Lorsque la visibilité signalée est inférieure à une RVR 1800 ou 3/8 SM, un véhicule « Follow-me » est obligatoire en conformité avec le circulaire CI 302-004.

Conditions d'exploitation

20 minutes avant l'heure de départ ou à l'arrivée du vol, le pilote place une demande pour l'assistance d'un véhicule d'escorte « Follow-me » afin de circuler sur les aires de manœuvre en communiquant avec le contrôleur sol de NAV CANADA.

Le pilote doit fournir les informations suivantes:

- La position exacte sur le site (numéro de barrière ou FBO);
- Le type d'appareil et la compagnie aérienne;
- L'heure de départ du vol (si applicable);
- La destination sur le site (seuil de piste, numéro de barrière ou FBO);

Le véhicule « Follow-me » se présentera devant l'appareil à une distance de 30m et les feux de détresse (Hazard) seront activés afin de démontrer qu'il est prêt à circuler, et ce, pour toute la durée de l'escorte;

Après autorisation de circuler, le véhicule « Follow-me » suivra les lignes guides à une vitesse de 30 kph (16 nœuds) jusqu'à la destination demandée.

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 ft to 600 ft)**Application**

These procedures apply to ground movements of aircraft arriving and departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the manoeuvring area. The following message will be added to the ATIS broadcast: "LOW VISIBILITY PROCEDURES IN EFFECT".

General

The approved taxi route from the Apron is shown on the Low Visibility Taxi Chart. Taxiway centreline lights will be illuminated in taxiway A, G, F, across Rwy 14, taxiway L to the stop bar.

Departures

When low visibility procedures are in effect, Rwy 23 is the only runway certified for low visibility operations.

Take-off roll cannot commence prior to the displaced threshold location, where the runway is served by high intensity white runway edge lights.

Sequencing of Aircraft Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-Off as described in CAP GEN Operating Minima.

Do not call for taxi clearance until the reported RVR is a minimum of 600.

Runway Level of Service	
Rwy	Certification
23	RVR 600

Stop Bar/Guard Light System

Each taxiway/runway entrances onto Rwy 05/23 is equipped with a stop bar consisting of red inset lights. Also, installed on either side of the stop bars located at the taxiway entrances onto Rwy 05/23 there are yellow flashing runway guard lights (Wig Wags). When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway.

AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR**Arrivals**

Arrivals are permitted on Rwy 23 for approved operators down to RVR 600. Twy J and Twy B are the approved exit routes. Landing aircraft traversing to Aprons I, II or III must exit Rwy 23 on Twy B or Twy J.

DE-ICING OPERATIONS

De-icing Operations

1. Ctc de-icing provider 30 min prior to dep if de-icing is rqrd. Notify de-icing provider of parking location, planned runway for dep and any special treatments prior to pushback: ICEMAN 122.950 OR 902-410-7748.
2. De-icing provider will assign de-ice pad and advise when ready.
3. DO NOT PUSH prior to assigned de-ice pad being ready.
4. To mitigate congestion on the APN, QUEUING for de-icing is NOT ACCEPTABLE.
5. Monitor Halifax GND 121.9 for all APN movement.
6. Follow instructions to designated de-ice pad.
7. Advise ICEMAN immediately once brakes set, aircraft configured and engines at idle.
8. After de-icing, configure aircraft for taxi, however, DO NOT MOVE AIRCRAFT.
9. Once instructed, contact Halifax GND 121.9 for taxi.

Apron Procedures

1. All aircraft departing Positions 301, 302, 303 and 304 must be towed to the Apron III tow bar disconnect position located on the taxi line between Positions 301 and 302.
2. Aircraft departing Positions 305, 306, 307 and 308 may taxi to the hold position at Apron III/Twy J. If required to stop for any reason while taxiing on Apron III, the aircraft must be towed to the tow bar disconnect position.
3. Monitor ground frequency 121.9.

REDUCED/LOW VISIBILITY PROCEDURES

**REDUCED VISIBILITY PROCEDURES (RVR less than 2600 ft (1/2 sm) to 1200 ft (1/4 sm))
and LOW VISIBILITY PROCEDURES (RVR less than 1200 to 600 ft)**

Application

These procedures apply to ground movements of aircraft departing under reduced and low visibility conditions.

Departures below RVR 600 are not authorized.

When weather conditions indicate visibility below RVR 2600, procedures will be implemented restricting aircraft and vehicle operations on the movement area. The following message will be added to the advisory: "REDUCED VISIBILITY PROCEDURES IN EFFECT" or "LOW VISIBILITY PROCEDURES IN EFFECT"

General

REDUCED VISIBILITY TAXI ROUTES

Taxi routes during reduced visibility operations are exclusive to the following routes:

1. Route 1 - Twy C, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.
2. Route 2 - Twy I, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.
3. Route 3 - Twy B, Rwy 14/32. For departure Rwy 05/23, continue Twy A to Rwy 05/23.

Aircraft restricted to one on the maneuvering area at any time during reduced visibility operations.

LOW VISIBILITY TAXI ROUTES

Taxi routes during low visibility operations are exclusive to the following routes:

1. Route 1 - Twy C, Rwy 14/32, Twy A - to Rwy 05/23.
2. Route 2 - Twy I, Rwy 14/32, Twy A - to Rwy 05/23.
3. Route 3 - Twy B, Rwy 14/32, Twy A - to Rwy 05/23.

Aircraft restricted to one on the maneuvering area at any time during low visibility operations.

When RVR falls below 600, movement of all aircraft ceases.

Rwy 14/32 will be used for taxiing purposes only during low visibility conditions.

DEPARTURES

Rwy 14/32 and Rwy 05/23 for departures in reduced visibility conditions.

Rwy 05/23 will be used for departures in low visibility conditions.

During RVOP/LVOP departure clearance or Pre-Taxi validation will not be given to any requesting aircraft if any other aircraft has been issued an approach or departure clearance until:

- either the arriving aircraft has landed and reported off the manoeuvring area or
- a departing aircraft is in contact with the Moncton Area Control Centre.

Take-Off roll cannot commence prior to the displaced threshold location where the runway is served by high intensity white runway edge lights.

REDUCED/LOW VISIBILITY PROCEDURES

REDUCED/LOW VISIBILITY PROCEDURES

REDUCED VISIBILITY PROCEDURES (RVR less than 2600 ft (1/2 sm) to 1200 ft (1/4 sm)) and LOW VISIBILITY PROCEDURES (RVR less than 1200 to 600 ft)

Sequencing of Ground Movements for Take-off

Pilots must follow instructions on Sequencing of Ground Movements for Take-Off as described in CAP GEN Operating Minima.

All aircraft are to obtain an IFR clearance or Pre-Taxi validation through the Saint John FSS prior to taxiing from any apron at Saint John Airport and are required to use the designated taxi routes.

Departing aircraft taxiing from a hangar along Twy B during RVOP or LVOP are required to taxi via Twy B to Rwy 14/32, Twy A to Rwy 05/23.

Do not request IFR clearance or Pre-Taxi validation until the RVR is greater than 600.

Guard Light System

Yellow flashing runway guard lights (Wig Wags) are installed at the Twy A entrance onto Rwy 05/23, Twy B onto Rwy 14/32, and Twy C and Twy I onto Rwy 14/32. When the twy edge lights are illuminated, the guard lights are turned on.

ARRIVALS

Arrivals are permitted on all runways for RVR 2600 ft (1/2 sm) to 1200 ft (1/4 sm). Twy A, Rwy 14/32, Twy B or Twy C and Twy A, Rwy 14/32, Twy I are the approved exit routes in RVOP.

Arrivals are not authorized in LVOP conditions.

RUNWAY LEVEL OF SERVICE

RWY	Certification	RWY	Certification
05	RVR 600	14	¼ sm
23	RVR 600	32	¼ sm

Note: Departing aircraft taxiing from a private hangar will be advised that RVOP or LVOP conditions are in effect. FSS will maintain one-in and one-out movements and will request aircraft access the designated taxi route.

LOW VISIBILITY PROCEDURES

Low Visibility Procedures (RVR less than 1200 ft to 600 ft)

Application

These procedures apply to ground movements of aircraft departing under low visibility conditions. Arrivals and departures below RVR 600 are not authorized. When weather conditions indicate visibility below RVR 1200 is imminent, procedures will be implemented restricting aircraft and vehicle operations on the manoeuvring area.

General

Low Visibility Taxi Routes

Standard taxi routes are shown on the Low Visibility Taxi Chart, taxiway surfaces are painted with enhanced yellow and black centreline markings, in addition, taxiways B, C, G, H, J and Runway 16/34 are equipped with green centreline lights.

Airport Surface Detection Equipment (ASDE)

Ground radar is used to monitor the position of aircraft operating on the manoeuvring area, in the event of an ASDE failure, ATC will restrict low visibility operations to one aircraft on the manoeuvring area at a time.

Departures

When low visibility procedures are in effect, Runway 10/28 is the only runway certified for low visibility operations. Intersection takeoffs are not authorized.

Sequencing of Aircraft Ground Movements for Take-off

Do not request start, push-back or call for taxi clearance until the reported RVR is greater than:

Aircraft/Pilot Take-off minima	Minimum RVR for start
1200 RVR	1000 RVR
600 RVR	600 RVR

Stop Bar/Guard Light System

Each taxiway/runway entrance onto runway 10/28 is equipped with a stop bar consisting of red in-set lights and red elevated lights located at the taxi holding position. Yellow flashing runway guard lights (Wig Wags) are installed at each side of the stop bar location. When the red stop bar lights are illuminated, green lead on lights beyond the stop bar are extinguished. When ATC issues a clearance to proceed onto the runway, the red stop bar lights will be extinguished and the green lead on lights beyond the stop bar will be illuminated. The stop bar is reset automatically as the aircraft moves onto the runway. In the event of stop bar/guard light failure, ATC will restrict operations in low visibility operations to one aircraft on the maneuvering area at a time.

“AT NO TIME SHALL A PILOT CROSS AN ILLUMINATED RED STOP BAR”

“Follow me” service is available via Pilot request to ATC.

DE-ICING OPERATIONS

De-icing Procedures

1. Contact ICEMAN thirty minutes prior to push back on 129.2 MHz.
2. Contact ST JOHN'S GND after pushback for taxi to CDF.
3. Hold short of CDF on H.
4. ST JOHN'S GND will advise the flight crew to contact ICEMAN on 129.2 MHz when the aircraft has taxied to the proper entry point.
5. ICEMAN will then delegate bay assignment & entry instructions. Expect frequency change to de-icing bay frequencies.
6. De-icing bay frequencies;
Bay 1 – Contact IDS on 122.950 MHz
Bay 2 – Contact IDS on 130.125 MHz
Bay 3/4 – Contact IDS on 128.950 MHz
7. Flight crews are advised to exercise discretion at all times while on the CDF. Directional signage and taxi lines on the CDF must be followed by flight crews at all times.
8. After de-icing is complete, return to 129.2 MHz for pad exit instructions. Flight crews must advise ICEMAN that all equipment and de-icing personnel are away from the aircraft and have returned to their designated safety zones.
9. ICEMAN will instruct the aircraft to hold its position on the CDF and contact ST JOHN'S GND on 121.9 MHz.
10. Aircraft to hold its position until ST JOHN'S GND issues further taxi instructions from the CDF.

Notes:

- Aircraft intending on returning to any apron after de-icing must drip dry for 25 minutes on CDF.
- Single engine taxi not permitted from CDF.
- Engine run-ups are not permitted on CDF.
- Contact 709-753-9742 for de-icing if Icehouse unavailable.

De-icing Bay Restrictions

1. BAY 1 – Maximum wingspan for de-icing operations 35.8m (117ft).
2. BAY 2 – Maximum wingspan for de-icing operations 35.8m (117ft).
Note: BAY 3 is closed/unusable when BAY 2 is occupied.
3. BAY 3 – Maximum wingspan for de-icing operations 79.75m (262ft).
Note: BAYS 2 and 4 are closed/unusable when BAY 3 is occupied.
4. BAY 4 – Maximum wingspan for de-icing operations 35.8m (117ft).
Note: BAY 3 is closed/unusable when BAY 4 is occupied.

Note: The above noted maximum wingspans are intended to protect adjacent de-icing bays, safety zones and the apron taxiway. Exceedances of these values are permitted but must be evaluated and approved by the airport authority to ensure special operating procedures are communicated and implemented.
