FOREWORD

1. The Designated Airspace Handbook (DAH) is available free of charge, in digital format, on the internet at <https://www.navcanada.ca> under the Aeronautical Publications/[Canadian Aeronautical Information Products](#) section on the NAV CANADA website. It will be updated every 56 days in its entirety.
2. A vertical line alongside an entry indicates new or revised information since the last issue of the manual.
3. This issue cancels and replaces all previous issues.

1. GENERAL

- 1.0.0-1 In accordance with the Canadian Aviation Regulations (CARs), Part VI, Subpart 1, airspace may be designated or changed by amendment of the Designated Airspace Handbook under the authority delegated to the Chief of Flight Standards, by the Minister of Transport.
- 1.0.0-2 It is requested that proposed changes, errors or omissions be brought to the attention of the Chief of Flight Standards, AARTA, Transport Canada, Ottawa ON, K1A 0N8. Military users should contact Air Traffic Management Coordination Office (ATM COORD), NAV CANADA, 4th Floor, WS423, 151 Slater Street, Suite 120, Ottawa ON, K1P 5H3, tel 613-992-1371.
- 1.0.0-3 Requests for the designation of Class F Advisory or Restricted airspace for short duration use may be approved by NOTAM (Notice to Airmen) if time limitations preclude the normal 56-day publication cycle and the need for the airspace is adequately justified. Requests shall be forwarded to the Chief of Flight Standards, who will approve the request and coordinate the issuance of a NOTAM with the NAV CANADA International NOTAM Office.

1.1 STANDARDS

- 1.1.0-1 Abbreviations, acronyms and terminology used shall conform to the extent possible with abbreviations and acronyms published in TP14371E Transport Canada Aeronautical Information Manual (TC AIM) and in the Transport Canada Advisory Circular (AC) 100-001 Glossary for Pilots and Air Traffic Services Personnel at link: (<https://www.tc.canada.ca/en/aviation/reference-centre/advisory-circulars/advisory-circular-ac-no-100-001>).
- Where airspace is designated by reference to the Can/USA bdry or to any portion of this boundary, the Definition of Boundary between Canada and the United States NAD 83, as published by the International Boundary Commission, shall be used.
- 1.1.0-2 The designation of airspace within this document applies to those portions overlying Canadian territory. Therefore, any portions of airspace overlying USA territory are excluded from the designations in this document.
- 1.1.0-3 All airspace designated in Part 3 is excluded from within airway or fixed RNAV boundaries.
- 1.1.0-4 Control Zones, as defined in Part 3, are excluded from all Transition Areas, Control Area Extensions and Terminal Control Areas as defined in Part 3.
- 1.1.0-5 Class F airspace, as designated in Part 5, when active, is excluded from all airspace designated in Part 3. Unless otherwise specified, when areas of Class F airspace are inactive, the rules for the appropriate airspace apply.
- 1.1.0-6 Where airspace, airways and fixed RNAV routes are designated by reference to a NAVAID, or to an Intxn or Fix, the coordinates used shall be listed in Part 2.
- 1.1.0-7 When a segment of airspace has a coordinate that is located close to a Navaid, Intersection or Aerodrome a location key for the point will be added to assist users of the DAH, to plot the airspace. Where multiple location keys could be chosen only one will be selected. EX. (*Sault Ste. Marie, ON-AD*) OR (*Yellowknife, NT-NDB*)
- 1.1.0-8 All segments between points defining airspace boundaries are calculated as Great Circles, unless otherwise specified.
- 1.1.0-9 Unless otherwise specified, whenever the word "mile(s)" is used in this document, it shall mean nautical mile(s).
- 1.1.0-10 All radials used shall be in degrees magnetic, unless otherwise specified in degrees true.
- 1.1.0-11 All coordinates shall be expressed in degrees/minutes/seconds, using the North American Datum 1983 (NAD 83). Canada has deemed NAD 83 coordinates to be equivalent to the World Geodetic System 1984 (WGS 84) for aeronautical purposes. All coordinate values are derived from the best source available. Coordinates obtained in

ABBREVIATIONS & ACRONYMS

decimal seconds are rounded, to two decimal places in Chapter 3 and one decimal in Chapter 2, by rounding values of 5 or greater up and values of less than 5 down.

1.1.0-12 All altitudes are above sea level (ASL) and will be inclusive unless otherwise indicated e.g. 5000' to 10,000'. To indicate when either the bottom or upper altitude is not included, the words below and above are to be placed before the appropriate altitude e.g. above 5000' to 10,000' or 5000' to below 10,000'.

1.1.0-13 Non-continuous segments in airways or air routes and some segments within US airspace are marked with an ellipsis (...).

1.2 ABBREVIATIONS & ACRONYMS

Abbreviations and acronyms used in this Part shall conform to the extent possible with abbreviations and acronyms published in TP14371E Transport Canada Aeronautical Information Manual (TC AIM) and in TP11958E Glossary for Pilots and Air Traffic Services Personnel.

1.3 GLOSSARY OF AERONAUTICAL TERMS AND DESIGNATIONS OF MISCELLANEOUS AIRSPACE

ADVISORY AREA:

Airspace of defined dimensions within which a high volume of pilot training or an unusual type of aerial activity may be carried out.

AIR DEFENCE IDENTIFICATION ZONE (See map page M6):

Airspace of defined dimensions extending upwards from the surface of the earth within which certain rules for the security control of air traffic apply.

AIRSPACE CLASSIFICATION:

Canadian Domestic Airspace has seven classifications. The application of any classification to an airspace structure determines the operating rules, the level of ATC service provided within the structure, and in some instances, communications and equipment requirements.

1. Class A

High level controlled airspace within the SCA, NCA and ACA. The horizontal and vertical dimensions of high level controlled airspace within these CTAs are illustrated on page M2 (Arctic, Northern and Southern Control Areas). The vertical dimensions of Class A high level controlled airspace within these areas are as follows:

- SCA : 18,000' ASL or from 700' AGL, whichever is higher, to FL600
- NCA : FL230 to FL600

DESIGNATED AIRSPACE HANDBOOK
Effective 0901Z 11 JULY 2024 to 0901Z 5 SEPTEMBER 2024

- ACA : FL270 to FL600
2. Class B*
All low level controlled airspace above 12,500' ASL or from the MEA, whichever is higher, to below 18,000' ASL. TCAs and associated primary CZs may also be classified Class B airspace.
 3. Class C*
TCAs and associated primary CZs may be classified Class C airspace.
 4. Class D*
TCAs and associated primary CZs may be classified Class D airspace.
 5. Class E*
All high level controlled airspace above FL600 within the SCA, NCA and ACA. Also, low level airways, low level fixed RNAV routes, CAEs, Transition Areas or CZs established without an operating control tower may be classified Class E airspace.
 6. Class F
Class F airspace is described in terms of horizontal and vertical dimensions, effective for a specified period of time. Class F airspace may be restricted airspace, advisory airspace, or danger areas, and can be controlled airspace, uncontrolled airspace or a combination of both.
 7. Class G
Airspace shall be classified G if it has not been designated A, B, C, D, E or F.
- * The terminology "Class B, C, D or E equivalent" used for the designations of MTCAs describes the equivalent level of service and operating rules for civilian aircraft operating within the MTCA and under military control.

ALTIMETER SETTING REGION:

All low level airspace within the SDA.

1. A point on the surface of the earth over which two or more position lines intersect. The position lines may be true bearings from NDBs (magnetic bearings shown on charts for pilot usage); radials from VHF/UHF NAVAIDS; centrelines of airways; fixed RNAV routes or air routes; localizers or DME distances; or
2. The point where two runways, a runway and taxiway, or two taxiways cross or meet.

LOW LEVEL AIRSPACE:

All airspace within the CDA below 18,000' ASL.

LOW LEVEL AIRWAY:

Controlled low level airspace, extending upwards from 2200 feet above the surface of the earth within the following specified boundaries:

1. VHF/UHF airways based on VORs/VORTACs
 - a) The primary airway width is 4 miles on each side of the centre line prescribed for such an airway
 - b) Where applicable, the primary airway width shall be increased between the points where lines, diverging 4.5° on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.
2. LF/MF airways based on NDBs or VHF/UHF airways based on VOR/VORTAC and NDB
 - a) The primary airway width is 4.34 miles on each side of the centre line prescribed for such an airway.
 - b) Where applicable, the primary airway width shall be increased between the points where lines, diverging 5° on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.

Where the changeover point is not midway between the NAVAIDS, the airway includes the airspace between the system accuracy lines which extend from the farthest facility, at angles of 4.5° for VHF/UHF airways, 5° for LF/MF airways and 5° for VHF/UHF airways based on a VOR/VORTAC and NDB, to the changeover point and are joined by lines from the nearer facility.

LOW LEVEL AIR ROUTE:

Class G Airspace, extending upwards from the surface of the earth, within the following specified boundaries:

1. Air routes based on VORs/VORTACs
 - a) The primary air route width is 4 miles on each side of the centre line prescribed for such an air route.
 - b) Where applicable, the primary air route width shall be increased between the points where lines, diverging 4.5° on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.
2. Air routes based on NDBs or a VOR/VORTAC and NDB
 - a) The primary air route width is 4.34 miles on each side of the centre line prescribed for such an air route.
 - b) Where applicable, the primary air route width shall be increased between the points where lines, diverging 5° on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.

Where the changeover point is not midway between the NAVAIDS, the air route includes the airspace between the system accuracy lines which extend from the farthest facility, at angles of 4.5° for VHF/UHF air route, 5° for LF/MF air route and 5° for VHF/UHF air route based on a VOR/VORTAC and NDB, to the changeover point and are joined by lines from the nearer facility.

LOW LEVEL FIXED RNAV ROUTE:

In low level airspace, a prescribed Area Navigation track between specified fixes. For routes in controlled low level airspace, the airspace extending upwards from 2200 feet above the surface of the earth within the following specified boundaries:

1. The primary route width is 10 miles on each side of the centre line prescribed for such a route.
2. The primary route boundary lines do not splay.

GLOSSARY OF AERONAUTICAL TERMS AND
DESIGNATIONS OF MISCELLANEOUS AIRSPACE

- Designated Altitude - Surface to FL050
- Time of Designation - Cont
- User Agency - RJOC (Atlantic), SWO (902) 427-2501 CSN 427-2501, rjocawatchofficer@forces.gc.ca or MAFF (902)427-2502 CSN 427-2502, rjoca.maff@forces.gc.ca

Maritime surveillance aircraft conduct daily all-weather operational flights in ELK MOA. These aircraft are required to operate on various headings and altitudes up to and including FL050 and to make rapid climbs and descents without prior warning. Because of operational considerations they operate without navigation or identification lights during the hours of darkness and often without Selective Identification Feature (SIF)/Identification, friend or foe (IFF).

In the interest of Flight Safety, it is essential that RJOC (Atlantic) be informed in advance of all flights or proposed flights in or through ELK MOA. Aircraft flight level(s), track and approximate times of ELK MOA penetration and exit are required. Military aircraft are encouraged to communicate directly with RJOC (Atlantic). On prior request, frequencies will be assigned on which to report position and obtain ELK MOA clearance. Anti-submarine warfare (ASW) aircraft will be routed clear of all known military and civil traffic. In-flight position reports or advisories, when not transmitted directly as above, may be relayed through Gander or Moncton ACC. These messages should specify "Pass to RJOC (Atlantic)".

On request of the pilot when filing flight plans at departure points in North America, aircraft flight plans may be relayed through ATC channels to Moncton ACC for RJOC (Atlantic). (See map page M10)

Maritime helicopters conduct essential over-water training and proficiency flights in the DIP Sectors on a daily basis. These flights often involve the use of sonobuoys, and helicopters routinely transition to/from the hover while in the area. Aircraft operating in or above this area should contact Shearwater ATC on 126.2 MHz or 231.95 MHz for advisory info. (See map page M11)

MILITARY TERMINAL CONTROL AREA:

Controlled airspace of defined dimensions normally established in the vicinity of a military aerodrome and within which special procedures and exemptions exist for military aircraft. The terminology "Class B, C, D or E equivalent" used for the designations of MTCAs describes the equivalent level of service and operating rules for civilian aircraft operating within the MTCA and under military control.

MINIMUM ENROUTE ALTITUDE:

The published altitude above sea level between specified fixes on airways or air routes which assures acceptable navigational signal coverage, and which meets the IFR obstruction clearance requirements.

MINIMUM OBSTRUCTION CLEARANCE ALTITUDE:

The published altitude above sea level between specified fixes on airways or air routes which meets the IFR obstruction clearance requirements for the route segment.

MINIMUM RECEPTION ALTITUDE:

Minimum reception altitude when applied to a specific VHF/UHF intersection, is the lowest altitude above sea level at which acceptable navigational signal coverage is received to determine the intersection.

TERMINAL CONTROL AREA:
Controlled airspace of defined dimensions normally established in the vicinity of one or more major aerodromes and within which air traffic control service is provided based on the airspace classification. The floor of a TCA shall not extend lower than 700 feet AGL.

TRACK:
The projection on the earth's surface of the path of an aircraft, the direction of which at any point is usually expressed in degrees from North (True, Magnetic or Grid).

TRANSITION AREA:
Controlled airspace of defined dimensions extending upwards from 700' AGL unless otherwise specified, to the base of overlying controlled airspace. Even if described with an ASL floor, the base of a Transition Area shall not extend lower than 700 feet AGL.

TRANSPONDER AIRSPACE:

Mode C
Controlled airspace of defined dimensions within which a functioning transponder incorporating an automatic pressure-altitude reporting device is required.

ADS-B
Controlled airspace of defined dimensions within which a functioning ADS-B transponder is required. *
* State aircraft and airspace where ATS is provided by the Federal Aviation Administration (FAA) are exempt

USER AGENCY:
The agency, organization or military command responsible for the activity for which Class F airspace has been provided. The User Agency shall be identified for Class F restricted airspace, and where possible, should be identified for Class F advisory airspace.

DESIGNATED AIRSPACE HANDBOOK
Effective 0901Z 11 JULY 2024 to 0901Z 5 SEPTEMBER 2024

4. DESIGNATION OF LOW LEVEL AIRWAYS AND FIXED AREA NAVIGATION ROUTES

The airway structure is determined and defined by the type of nav aids forming the airway. Intersections/fixes will only be used when required for defining airway turning or termination points. Therefore, the following airway definitions do not include those intersections/fixes that are only required for air traffic control purposes.

All airspace designated in Part 3 is excluded from within airway or fixed RNAV boundaries.

The centre line or track of each airway or fixed RNAV route shall be a straight line extended in the manner here under described through the centre of the points specified for the airway or route. The lateral dimensions of airways or fixed RNAV routes are found in Part 1. Non-continuous segments in airways or air routes and some segments within US airspace are marked with an ellipsis (...).

The airspace classification for low level airways and fixed RNAV routes is:

Class B airspace – Above 12,500' ASL or from the MEA, whichever is higher.

Class E airspace – The airspace extending upwards from 2200' AGL to 12,500' ASL or to below the MEA, whichever is higher.

5. DESIGNATION OF CLASS F AIRSPACE

Class F airspace, as designated in Part 5, is excluded from all airspace designated in Part 3.

Each Danger, Restricted and Advisory Area within Canada has been assigned an identification code group which consists of four parts as follows:

- Part a) will consist of the nationality letters "CY"; and
 Part b) will consist of the letter "D" for Danger Area, "R" for Restricted Area or the letter "A" for Advisory Area; and
 Part c) will consist of a three-digit number which will identify the area. This number will also indicate the region of Canada within which the area lies according to the following table:

101 to 199	- British Columbia
201 to 299	- Alberta
301 to 399	- Saskatchewan
401 to 499	- Manitoba
501 to 599	- Ontario
601 to 699	- Quebec
701 to 799	- New Brunswick - Nova Scotia - Prince Edward Island - Newfoundland & Labrador
801 to 899	- Yukon Territory
901 to 999	- Northwest Territories and Nunavut (including the Arctic Islands)

- Part d) will, in the case of Advisory Areas, consist of the letter A, F, H, M, P, S or T in brackets after the three digit number to indicate the type of activity within the area as follows:

A	- Acrobatic
F	- Aircraft Test Area
H	- Hang Gliding
M	- Military Operations
P	- Parachuting
S	- Soaring
T	- Training

e.g. The identification code group CYA113(A) is as follows:

CY	- indicates Canada
A	- indicates Advisory Area
113	- indicates the number of the area in British Columbia
(A)	- indicates acrobatic activity takes place within the area

The whole code group would be deciphered to read: "Acrobatic activity in Advisory Area 113, in British Columbia, Canada."

Designated Mountainous Regions in Canada

Mountainous regions in Canada are designated as follows: The line joining two consecutive turning points is a great circle, unless otherwise stated, except where such points are on the same parallel of latitude when the line is along that parallel of latitude.

- 1 The land area bounded by a line N69°35' W141°00' to N69°35' W140°00' to N68°14' W135°00' to N61°45' W121°14' to N53°34' W113°31' to N51°06' W114°01' to N49°00' W108°15'; thence along the Can/USA bdry to N48°29'38" W124°43'35" to N48°30' W125°00' to N52°00' W132°00' to N54°35' W134°30' to N54°30' W134°00' to N54°30' W132°30' to N54°42'30" W130°36'30"; thence along the Can/AK bdry to the point of beginning.
- 2 The area bounded by a line N59°00' W66°00' to N57°00' W66°00' to N55°00' W71°00' to N49°00' W73°00' to N46°00' W77°00' to N45°40' W76°00' to N45°40' W75°00' to N45°50' W74°00' to N46°30' W73°00' to N46°59' W71°00'; along the north shore of the St. Lawrence River, the north shore of the Gulf of St. Lawrence, and the coastline of Labrador and Quebec to the point of beginning.
- 3 The area bounded by a line N48°30' W64°15' to N48°20' W65°00' to N48°20' W66°00' to N47°30' W65°50' to N46°15' W66°30' to N46°15' W67°47'; thence along the Can/USA bdry to N45°01' W73°00' to N46°00' W72°00' to N47°00' W70°30'; thence along the south shore of the St. Lawrence River and the west shore of the Gulf of St. Lawrence to the point of beginning.
- 4 The Island of Newfoundland.
- 5 The Islands of Baffin, Bylot, Devon, Ellesmere and Alex Heiberg.

IFR flights within Designated Mountainous Regions but outside of areas for which minimum altitudes for IFR operations have been established (including minimum radar vectoring altitudes), shall be operated at an altitude which is at least 2000 feet above the highest obstacle within 5NM of the aircraft when in areas 1 and 5, or 1500 feet when in areas 2, 3 and 4.
